For the administrator

Administrator guide to the website and CRM

Leads, quotes, installations, staff schedules, stock, the shop and the public website — what each screen is for and exactly how to use it. No technical knowledge needed.

Vertical Energy & Networks Ltd

Version 4 · October 2026

Contents

Chapters 1–3 explain how everything fits together. After that, each chapter covers one item in the menu, in the same order as the menu.

26 Questions and fixes

The two guides

This is the **Administrator guide**. There is a separate, shorter **Staff guide** for installers and supervisors that explains signing in, the profile, clocking in, reporting problems and work reports on the phone. Give every new staff member a copy.

1 How it all fits together

There are two parts: the **public website** your customers see, and the **CRM** — the private workspace where you and your staff run the business. You use it at **/verticaladmin**; your staff use it at **/staff**. Anything a visitor does on the website lands in the CRM straight away.

The journey of a customer

Visitor
Reads the site, uses the cost estimator or chats with Vola.

›

Lead
Fills in "Get a free quote". A customer record and a follow-up are created.

›

Quote
You build a quote and send the link by WhatsApp.

›

Accepted
The customer accepts online. They become "Won".

›

Installation
You create the job, assign and schedule the crew.

›

Aftercare
Warranty, maintenance visits and support tickets.

One administrator, everyone else is staff

You are the only **administrator**. You can see and change everything, and you are the only person who can create logins and change company settings. Everyone else is **staff**: you decide which sections each staff member can use (chapter 21). A field technician usually only gets the field app; a sales rep gets customers, follow-ups and quotes.

Where things come from

On the website	Appears in the CRM as
"Get a free quote" form	A new lead in **Customers & leads**, a "Call new lead" **follow-up** and a notification. The lead shows their package, battery, what they want to power, how they prefer to be contacted and their confirmed location.
Cost estimator on the homepage	The same quote form, filled in with the system size and appliances the visitor chose (source "calculator").
Chat with Vola (text or voice)	A conversation in **Website chats**. If the visitor leaves their number, a lead.
Contact, support and maintenance forms	A lead or a **support ticket**.
Shop order	An order in **Shop & orders**.
Every page visit	Counted in **Visitors & heatmaps** (no cookies needed).

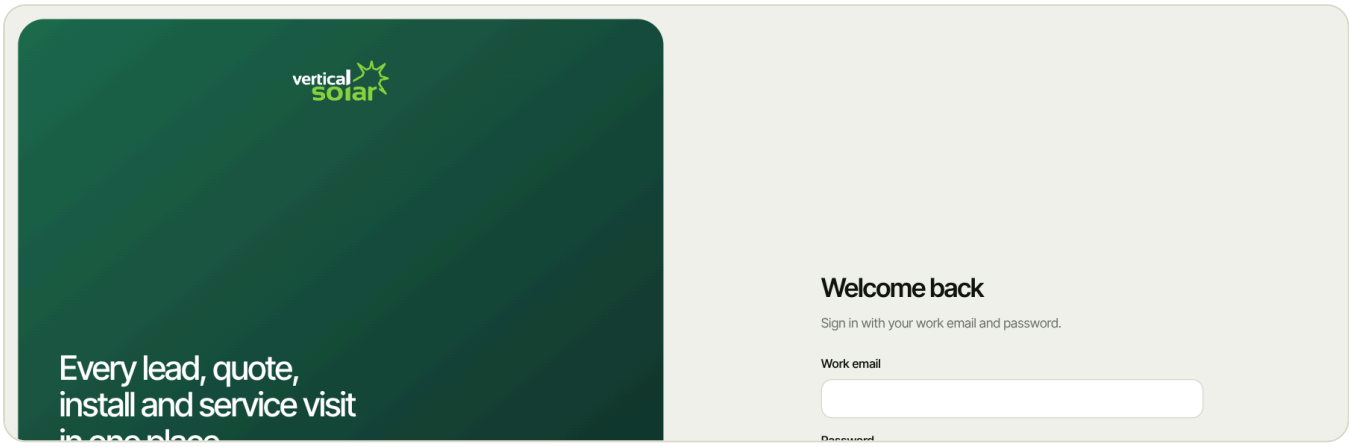

What runs on its own

- **Every 10 minutes:** schedule reminders to staff, "running late" alerts, "no location" alerts for staff on shift, and auto-closing shifts left open for 14 hours.

- **Every morning at 7am:** follow-ups to book maintenance visits due within a week, check-in calls for customers not contacted for 90 days, a reminder of today's follow-ups, warnings for low stock and warranties ending within 30 days, and a summary email if you set one up (chapter 22).

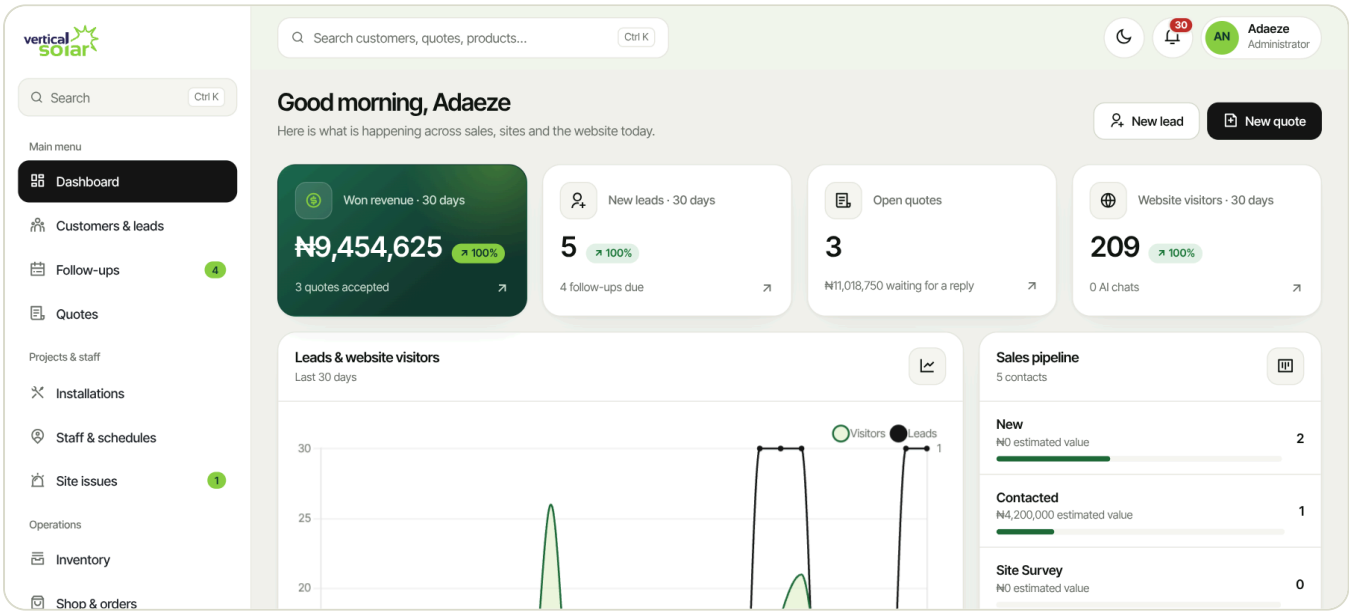

2 Signing in and finding your way

Go to your website address followed by **/verticaladmin** (for example verticalsolar.com.ng/verticaladmin) and sign in with your email and password. This page is yours alone: staff cannot sign in there — they use **/staff**. If you open a /staff link (for example from an email), the app moves you to /verticaladmin.

The sign-in page. Staff use the same page. The eye icon shows or hides the password.

The screen layout

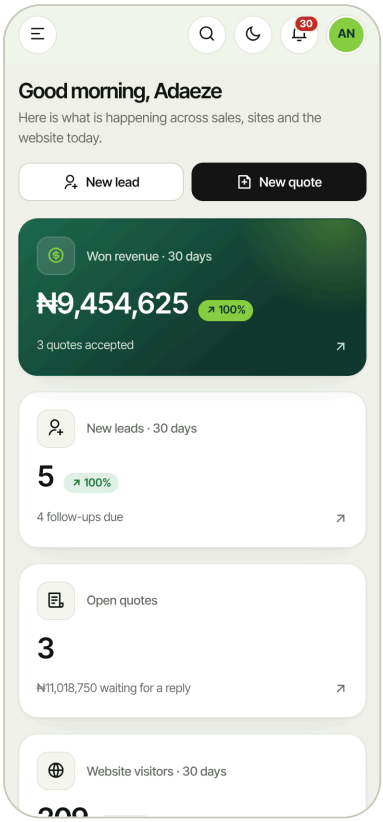

Menu on the left, top bar, page title with its action buttons underneath.

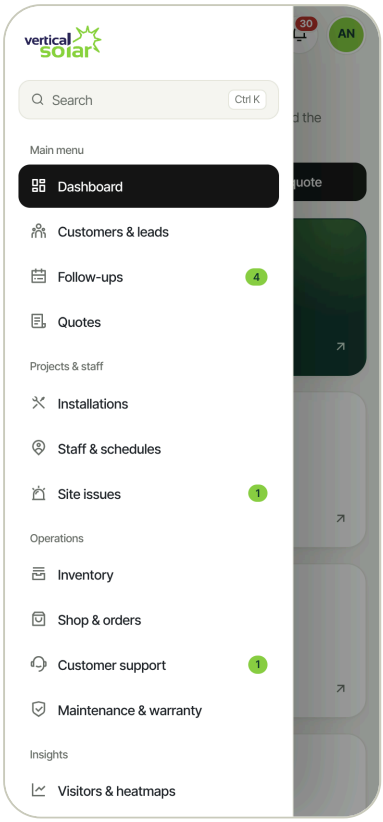

Menu (left)	Grouped into Main menu, Projects & staff, Operations, Insights, Website and Account. Yellow numbers show what needs attention: due follow-ups, new site issues, open support tickets.
Search	Find any customer, quote or product by typing a name, phone number or quote number. Shortcut: **Ctrl K** (or ⌘K on a Mac).
Top-right icons	Moon/sun switches dark and light mode. The bell opens notifications. Your initials open **My profile**.

Page title area	Every page's main buttons (New lead, New quote, Schedule staff…) sit just under the top bar, on the right of the page title — never mixed in with the top icons.
Sign out	At the bottom of the menu, next to your name.

On your phone

The dashboard on a phone.

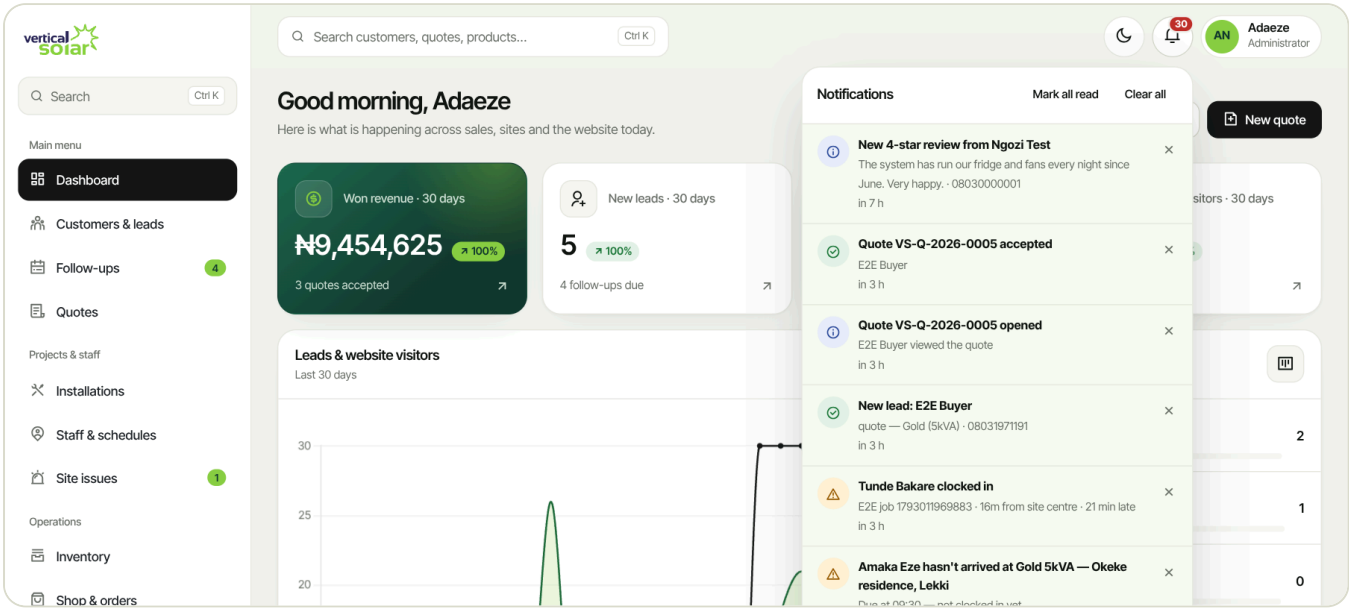

Tap ☰ to open the menu.

Everything works on a phone. Tables turn into cards, and the page buttons stack under the title. To install it like an app: in Chrome tap ⋮ → **Add to Home screen**; on iPhone in Safari tap Share → **Add to Home Screen**.

> **Loading and empty pages**
>
> While a page loads you see grey placeholder shapes. If a list is empty, it says so and offers the button to add the first item. If the internet drops, you see "This page didn't load" with a **Try again** button.

3 Notifications and phone alerts

The bell collects everything that needs your attention: new leads, accepted quotes, staff clocking in or leaving a site, late staff, site issues, work reports, low stock and new support tickets.

The notifications panel. Each one has a ✕ to close it.

- **Click a notification** to open the related page (the quote, the job, the issue).
- ✕ closes that notification. It is gone for you and does not come back.
- **Mark all read** clears the red number but keeps the list. **Clear all** empties the list.
- Icons and colours show the type: green for good news (quote accepted, work report), amber for warnings (low stock, late staff), red for danger (staff left a site, urgent site issue).

Phone alerts

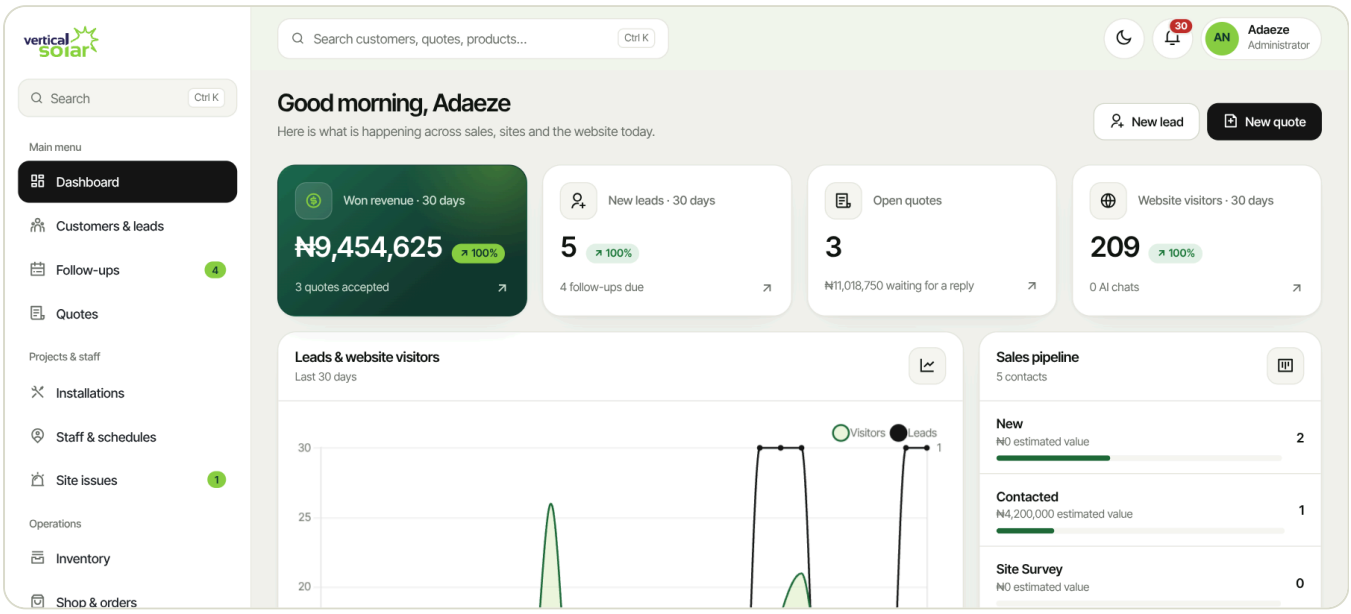

Turn on alerts so important things reach your phone even when the CRM is closed: urgent site issues, staff leaving a site, staff not arriving, and anything sent to you personally.

1. Open **My profile** (your initials, top right).
2. Under **Alerts on this device**, click `Turn on alerts` and allow notifications when the browser asks. It then says `Alerts are on`.
3. Repeat on each device — your laptop and your phone. On iPhone, add the CRM to the Home Screen first and open it from there.

> **"Alerts are blocked in this browser"**
>
> You (or someone) clicked Block earlier. Click the padlock icon left of the web address → Site settings → Notifications → Allow, then reload the page.

4 Dashboard

Your morning overview: money, new business, open quotes and website visitors at the top; what needs doing in the middle; who is on site today at the bottom.

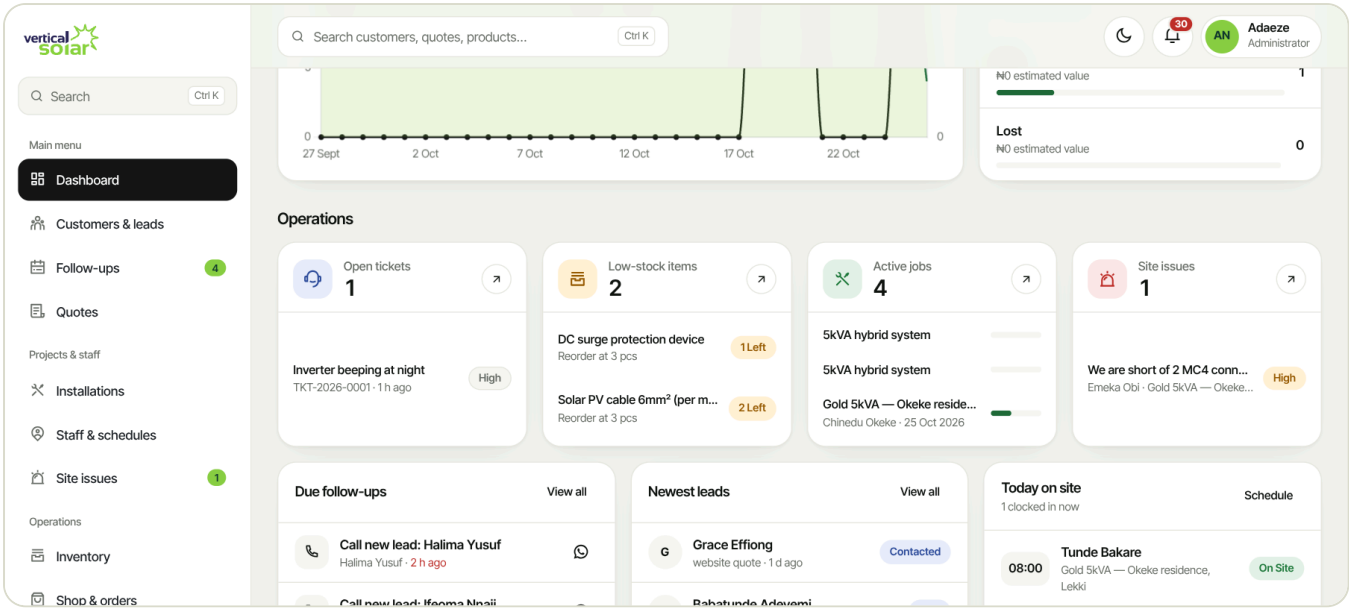

Top of the dashboard.

The four headline cards

Won revenue · 30 days	Total of quotes accepted in the last 30 days, with the change against the 30 days before.
New leads · 30 days	How many new enquiries, and how many follow-ups are due.
Open quotes	Quotes sent but not yet answered, and their total value waiting for a reply.
Website visitors · 30 days	Unique visitors, and how many chats Vola had.

Click the small arrow on any card to go to that section. Under the cards: a chart of leads against website visitors, and the **Sales pipeline** showing how many customers are at each stage and their estimated value.

Operations, due follow-ups, newest leads and today on site.

Operations

Four cards show what needs action, with the top items listed inside each card:

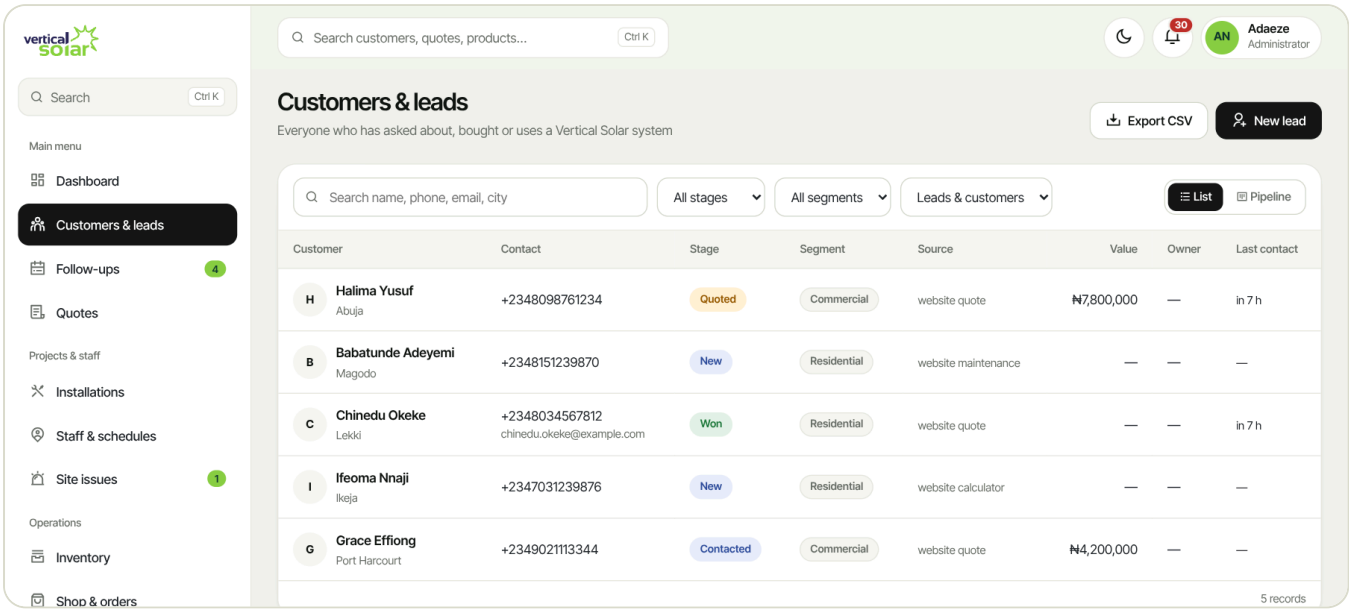

- **Open tickets** — customer support requests, with priority.
- **Low-stock items** — products at or below the warning level you set, with how many are left.
- **Active jobs** — installations scheduled or in progress, with a progress bar.
- **Site issues** — problems staff reported that are not resolved yet.

Due follow-ups, Newest leads, Today on site

Call or WhatsApp straight from **Due follow-ups**. **Newest leads** shows the latest enquiries with their stage. **Today on site** lists today's schedule with each person's status: On site, Late or Expected.

5 Customers & leads

One record per person or business — from the first enquiry to years of aftercare.

The list. Switch between List and Pipeline at the top right of the table.

Finding people

- Type a name, phone or email in the search box. Filter by stage, by segment (residential, commercial, industrial) and by leads or customers.
- **Pipeline** shows customers as cards in columns by stage. **List** shows a table.
- **Export CSV** downloads the list for Excel.

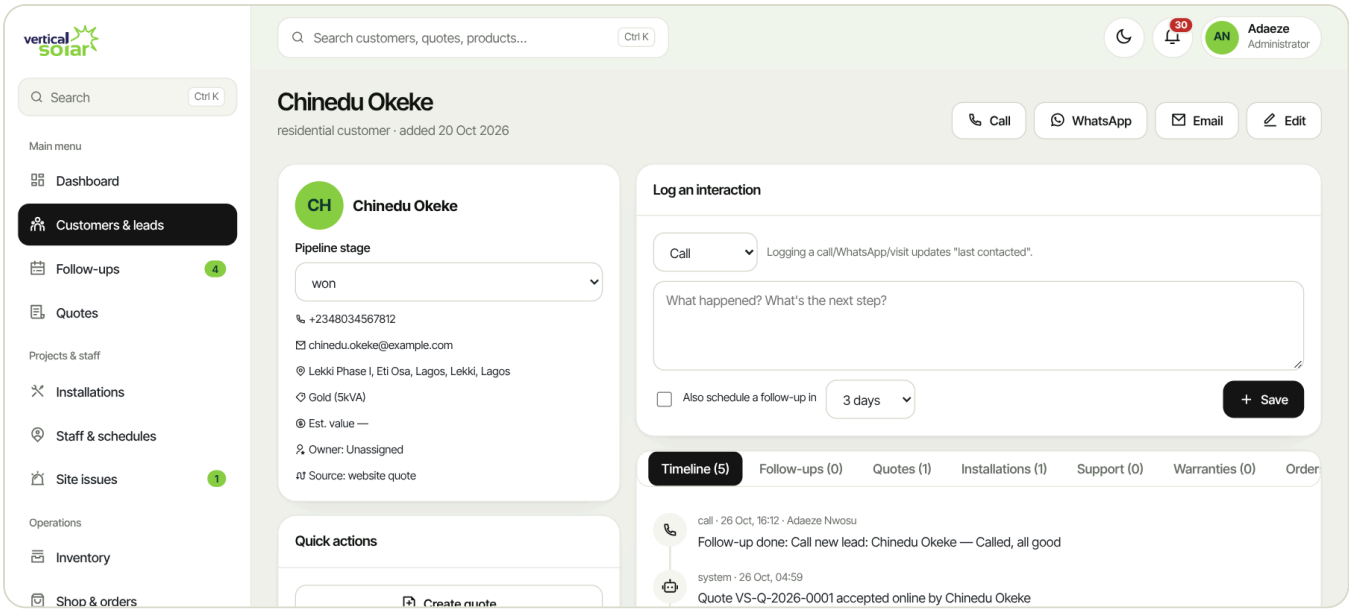

Pipeline stages

New	Just came in. Call within the hour if you can.
Contacted	You spoke to them.
Site Survey	A survey is booked or done.
Quoted	A quote was sent (set automatically when you send one).
Negotiation	Discussing price or details.
Won	They accepted (set automatically when they accept online).
Lost	They went elsewhere or are not going ahead.

Adding a lead yourself

Someone called or walked in? Click **New lead**, fill in the name, phone, location (type and pick from the list), segment and what they need, then save. A "Call new lead" follow-up is created for you.

Inside a customer record

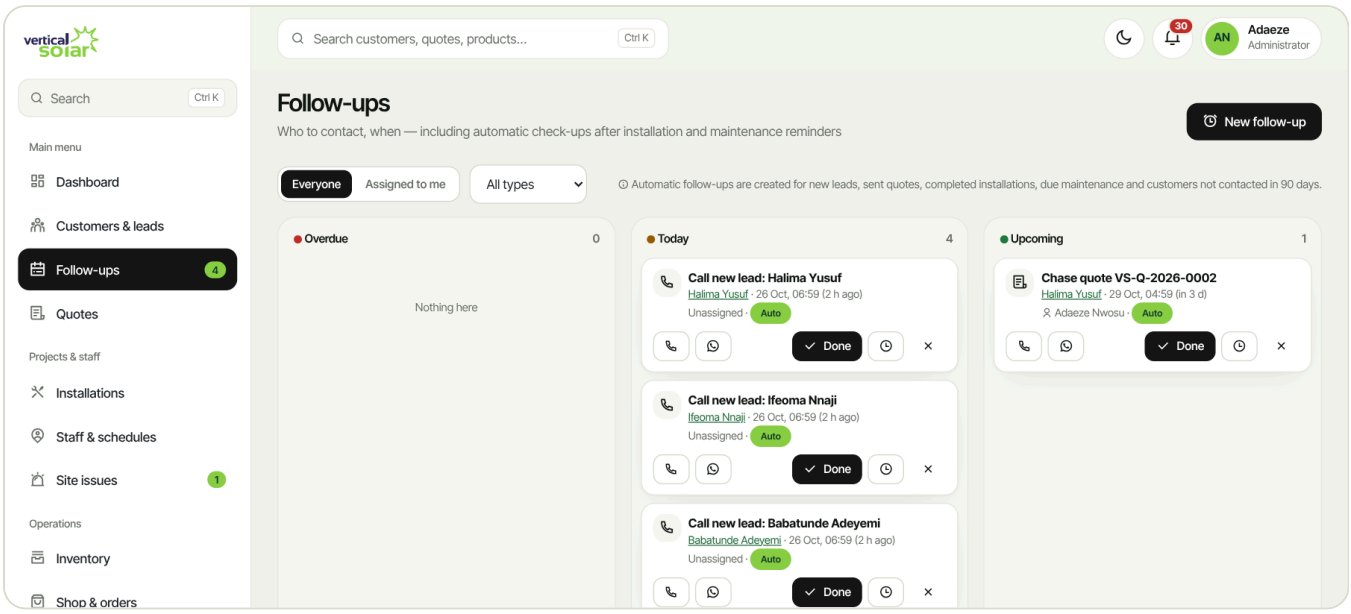

A customer record: details on the left, log and history on the right.

- **Top buttons:** Call, WhatsApp, Email and Edit.
- **Pipeline stage:** change it from the drop-down.
- **Log an interaction:** choose the type (Call, WhatsApp, Email, Site visit, Meeting or Note), write what happened and the next step, tick *Also schedule a follow-up in* 1 day, 3 days, 1 week or 1 month if needed, and click Save. Calls, WhatsApps and visits update "last contacted".
- **Quick actions:** Create quote, Schedule follow-up, Schedule installation, **AI summary** (a short summary of the history) and **AI follow-up message** (a ready-to-send WhatsApp message — always read it before sending).
- **Tabs:** Timeline (everything that happened, including what the customer typed on the website), Follow-ups, Quotes, Installations, Support, Warranties and Orders.
- **Edit** opens all their details: company, WhatsApp number if different, address (pick it from the list — it is reused for the installation site), segment, source, what they are interested in, estimated value and who looks after them. Only the administrator sees Delete customer here.

6 Follow-ups

Your to-call list. Nothing slips through: every new lead, sent quote, finished installation and due maintenance creates a follow-up automatically.

Overdue, Today and Upcoming. "Auto" marks follow-ups the system created.

Working through the list

1. Start with **Overdue**, then **Today**.
2. Use the phone or WhatsApp button on the card to contact the customer.
3. Click **Done** and type the outcome (for example "Wants Gold with lithium, will pay deposit Friday"). The outcome is saved on the customer's timeline.
4. Not reachable? Click the clock button to **snooze** it to tomorrow. Not needed any more? Click ✕ to skip it.

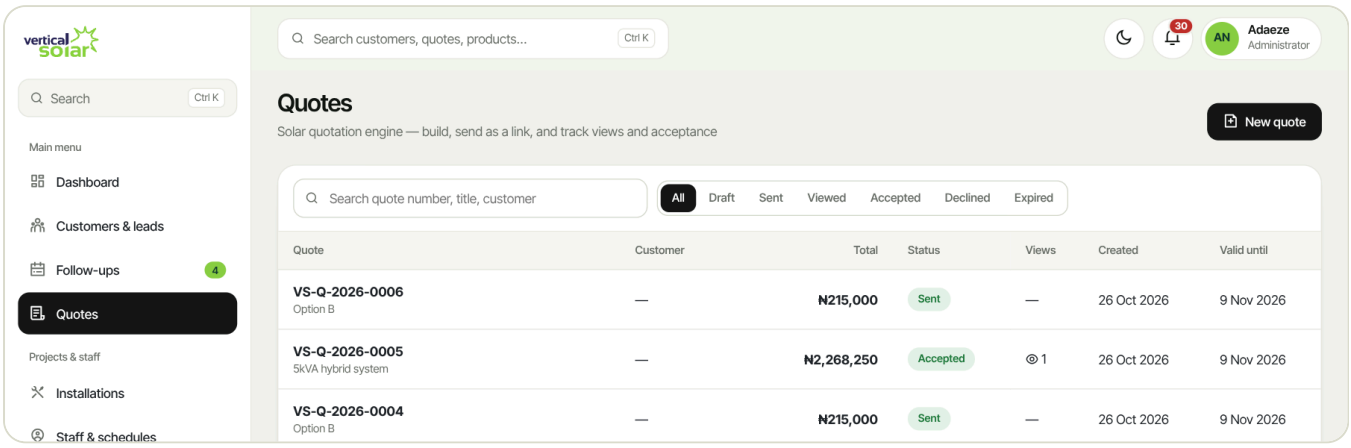

Automatic follow-ups

New lead from the website	"Call new lead: ..." due straight away.
Quote sent	"Chase quote ..." due in 3 days. It is closed automatically when the customer accepts or declines online, and sending the same quote again does not create a second one.
Installation completed	A one-week check-in call.
Maintenance visit due within 7 days	"Book maintenance visit for ...".
Customer not contacted for 90 days	"Quarterly check-in" — ask how the system is doing, and for referrals.

Use **New follow-up** to add your own, choose who it is assigned to and when. Staff with this section see **Assigned to me**.

7 Quotes

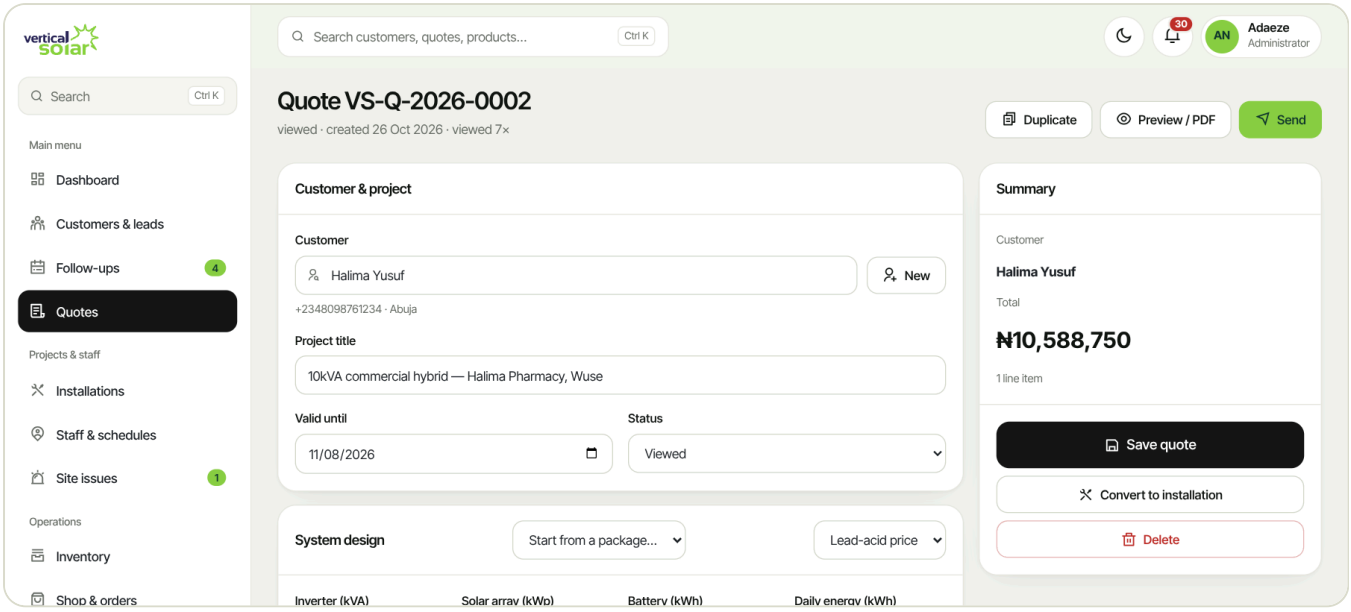

Build a professional quotation in minutes, send it as a link, see when it was opened, and let the customer accept online.

All quotes with status, number of views and validity.

Create a quote

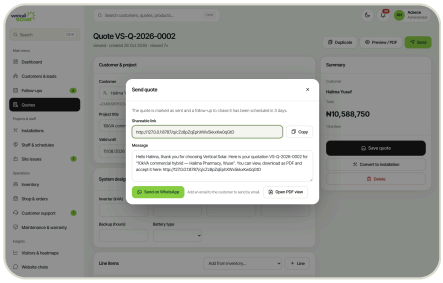

1. Click **New quote** (or **Create quote** on a customer's page, which fills in the customer).
2. **Customer:** start typing the name and pick it, or click **New** to add one.
3. **Project title:** e.g. "10kVA commercial hybrid — Halima Pharmacy, Wuse". **Valid until** is set 14 days ahead; change if needed.
4. **System design:** choose **Start from a package...** and pick lithium or lead-acid pricing. The inverter, solar array, battery and line items are filled in for you. Adjust as needed.
5. **Line items:** **Add from inventory...** adds a product with its price; **+ Line** adds a custom line (labour, transport, cabling). Change quantities and prices. Add a discount or VAT if needed; the total updates as you type.
6. Click **Save quote**. It gets a number such as VS-Q-2026-0002.

The quote editor with the summary and actions on the right.

Send it

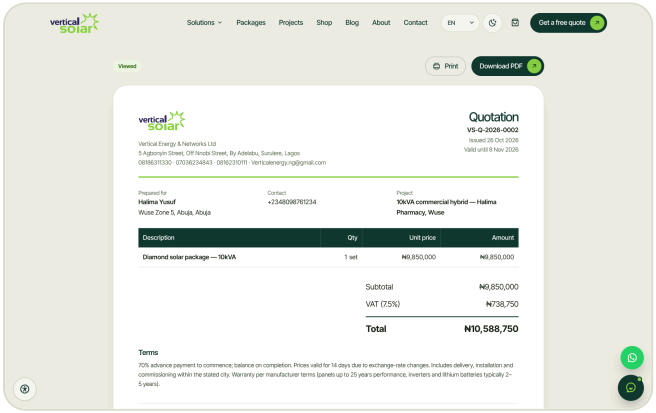

1. Click **Send** (top right).
2. Check the message. Click **Send on WhatsApp** to open WhatsApp with the message and link ready, or **Copy** the link to paste anywhere. If the customer has an email address and email is set up, you can also email it.
3. The quote is marked **Sent**, the customer moves to **Quoted**, and a "Chase quote" follow-up is set for 3 days.

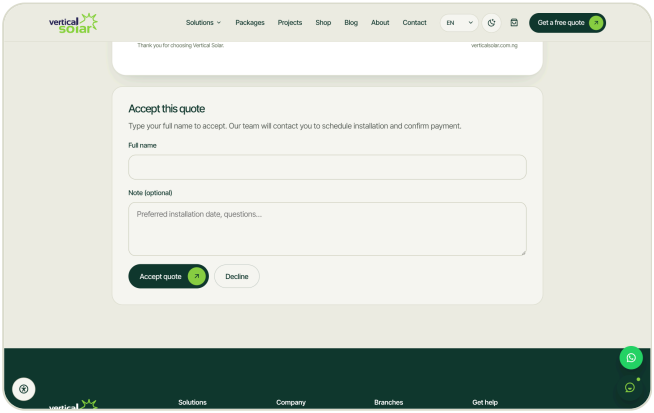

The Send window.

When the customer opens the link, the status changes to **Viewed**, the views counter goes up and you get a notification.

What the customer sees

The quote page, with Print and Download PDF.

To accept, they type their full name.

The customer can download a PDF, print, **Accept** (by typing their full name, with an optional note such as preferred installation dates) or **Decline**. On acceptance, the quote becomes **Accepted**, the customer becomes

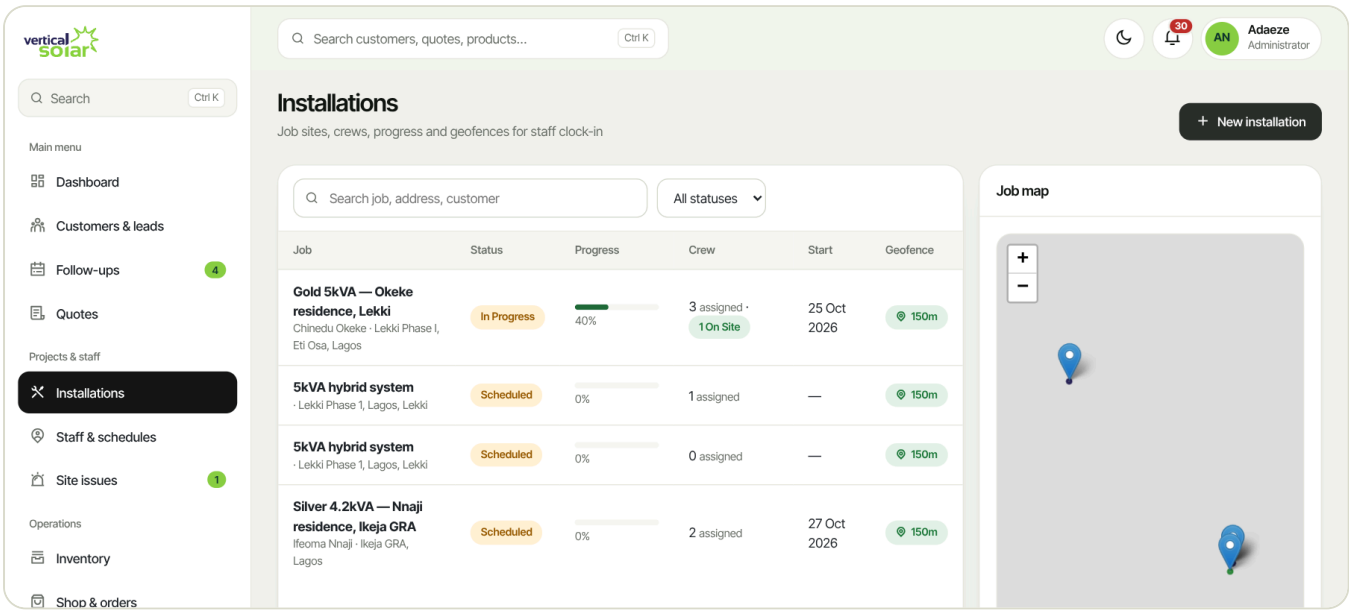

Won, and you are notified.

Other actions

- **Preview / PDF** — see exactly what the customer sees.
- **Duplicate** — copy a quote as a starting point for a similar customer or an alternative option.
- **Convert to installation** — once accepted, creates the installation job with the customer, title, address and system filled in. Clicking it again opens the same job instead of making a duplicate.
- **Status** can be changed by hand (Draft, Sent, Viewed, Accepted, Declined, Expired) — for example if the customer accepted by phone.

8 Installations

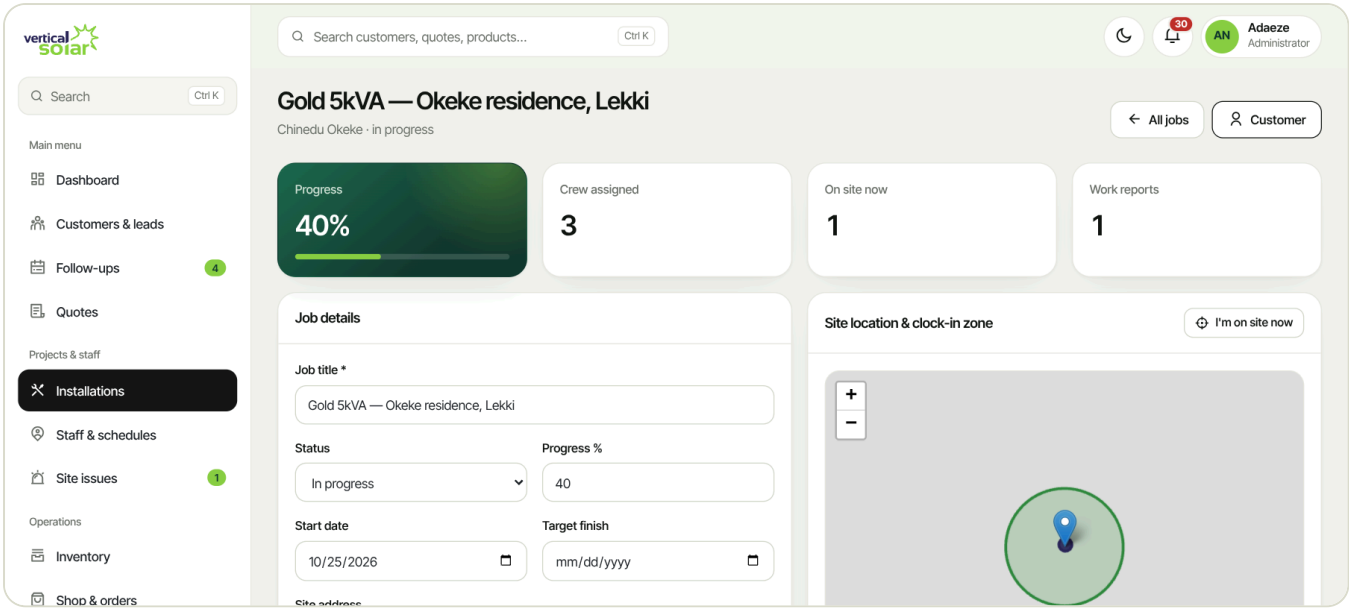

Every job site: where it is, who works on it, when they should be there, how far along it is, and every clock-in and work report.

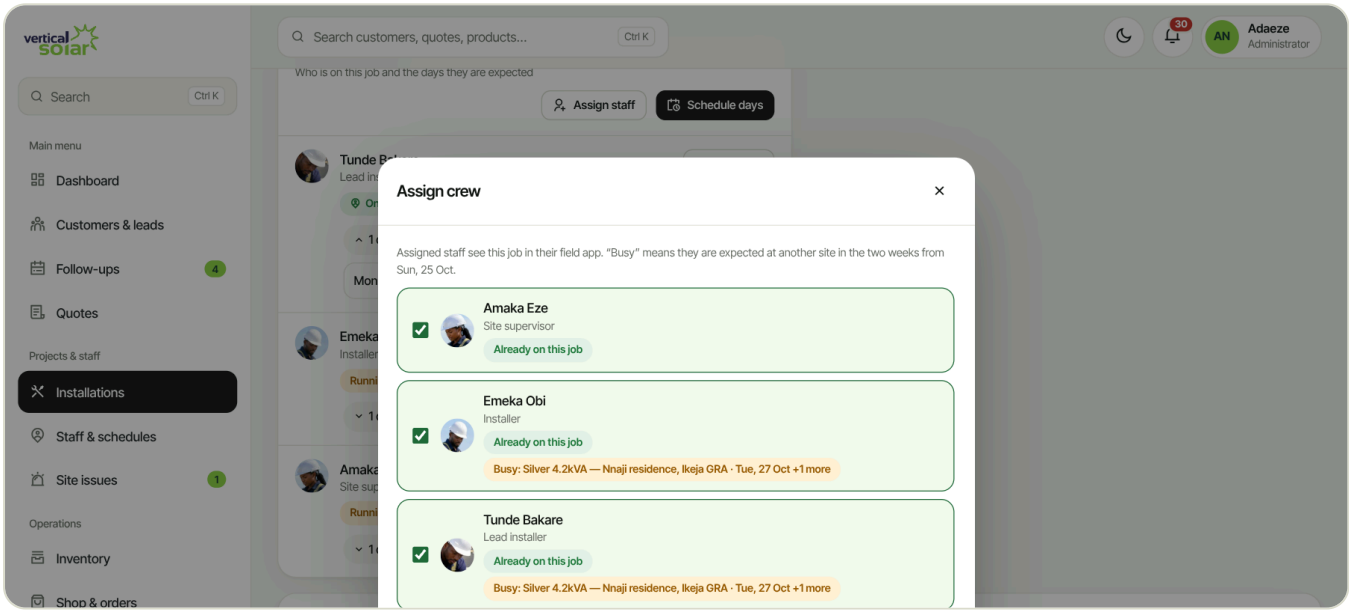

All jobs with status, progress and crew, and a map of job sites.

Create a job

1. Click **New installation**, or **Convert to installation** on an accepted quote, or **Schedule installation** on a customer.
2. Give it a clear **job title** (package + customer + area) and choose the customer.
3. **Site address:** type the house number, building and street (e.g. *"No. 4, Green Court, Admiralty Way, Lekki"*) and **pick it from the list**. Each suggestion shows how exact it is: **Building**, **House**, **Street** or **Area**. You see **Address confirmed** and the map pin jumps there; if only the street is confirmed, add the house number or building name at the start. Drag the pin onto the exact house if needed. If you are standing at the site, click **I'm on site now** to use your phone's location.
4. **Clock-in zone:** the green circle where staff are allowed to clock in. Choose *Tight — 75 m* for a small compound, *Normal — 150 m* for most homes, *Wide — 300 m* for an estate or plaza, *Very wide — 600 m* for a factory or farm, or *Huge — 1 km*.
5. Set status, start date, target finish, warranty and maintenance interval (1 month or more), and **notes for the crew** (gate code, where the inverter goes, customer's preferences). Staff see these notes on their phones.
6. Click **Save** at the bottom of **Job details** — Save and **Mark completed** are always the last buttons in that card.

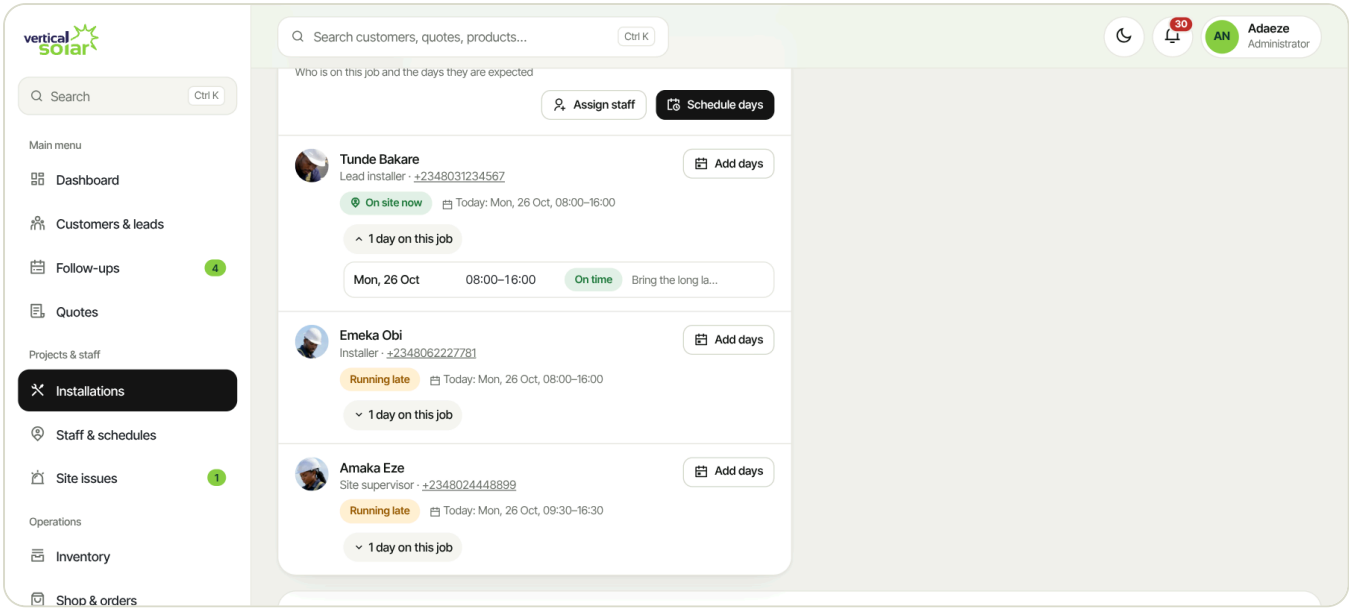

A job: progress, crew, who is on site now, work reports, details and the clock-in zone.

Assign crew: who is already on the job, and who is busy elsewhere.

Crew and schedule

The **Crew & schedule** card lists one row per person: their job title and phone, whether they are On site now or Running late, and their **next day** on this job. Their days are not shown as one long list — click **"3 days on this job"** under a person to open their days, with the time and status of each. ⊗ cancels a day (the person is told).

Crew & schedule: one row per person, with their days in a dropdown.

- **Assign staff** adds people to the crew. People already on the job are marked **Already on this job**. Anyone expected at another site while this job runs is marked **Busy: (site) · (day)**, so you can pick someone free. New people get a “New job assigned” notification and the job appears in their field app.
- **Schedule days** sets the days and times people must be on site (chapter 9). **Add days** on a person’s row does the same for just that person.
- **Attendance log** lists every clock-in and clock-out, distance from the site and time spent off site. **Work reports** show staff photos and progress — review them and add a note.

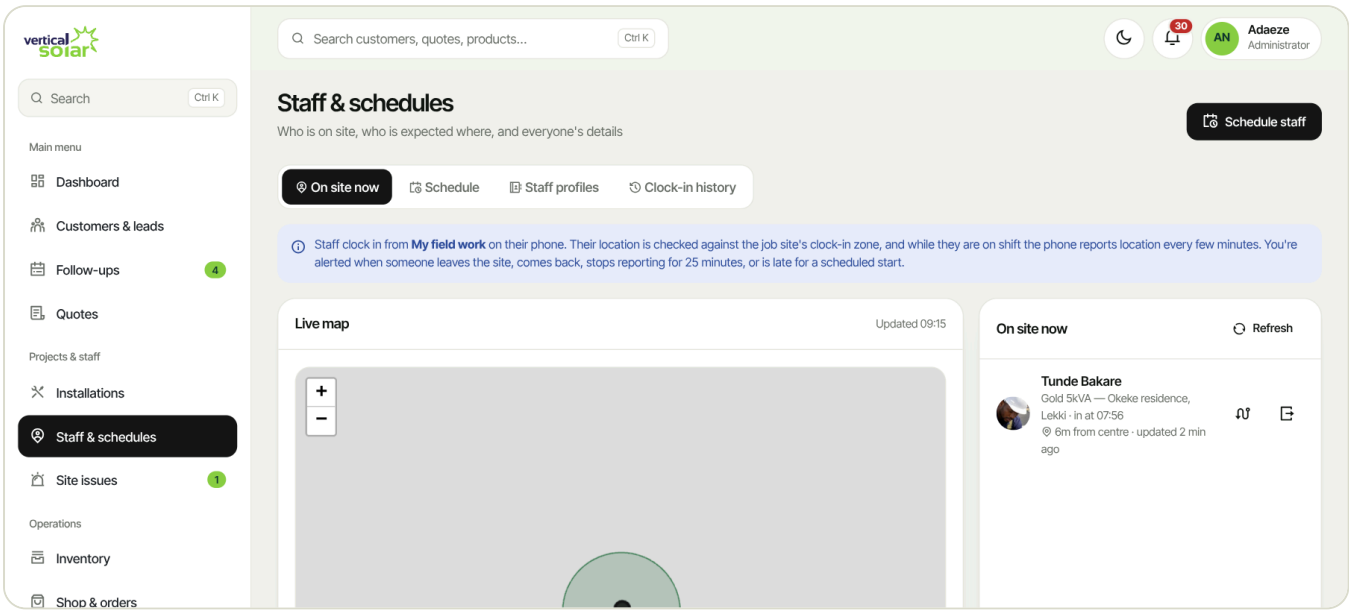

Job status

Scheduled → **In progress** (set automatically when the first person clocks in) → **Completed**. Use **On hold** when waiting for the customer or parts, and **Cancelled** if the job is off.

> ### Mark completed
> Clicking **Mark completed** sets progress to 100%, marks the customer Won, and automatically creates a one-week check-in follow-up, the first maintenance visit (after the “maintenance every (months)” interval, 6 months if not set) and a workmanship warranty (12 months if not set).

9 Staff & schedules

Who is on site right now, who is expected where and when, and everyone's staff details.
Four tabs: **On site now**, **Schedule**, **Staff profiles** and **Clock-in history**.

On site now: a live map and the list of staff clocked in.

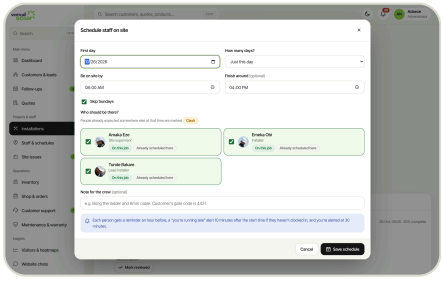

How location checking works

- Staff clock in from **My field work** on their phone. They can only clock in inside the job's clock-in zone; a blocked attempt is reported to you.
- While on shift, the phone reports its location every few minutes. You are alerted when someone **leaves the site**, when they **come back**, and when a phone has **stopped reporting for 25 minutes** (phone off, no data, app closed).
- Shifts left open for 14 hours are closed automatically and you are told.

The **On site now** list shows when each person clocked in, how far they are from the site centre and when their phone last reported. Two buttons: **Show route** draws on the map where their phone has been during this shift, and **Clock out for them** closes the shift if they forgot.

Schedule staff on a site

1. Click **Schedule staff** (here, or on the job's page).
2. Choose the **job site**. Set the **first day**, **how many days** in a row (Sundays are skipped unless you untick it), the time to **be on site by** and the **finish** time (must be later than the start).
3. Tick **who should be there**. As you change the days and times, anyone already expected at another site at that time is marked **Clash**; people already booked on this job at that time show **Already scheduled here**.

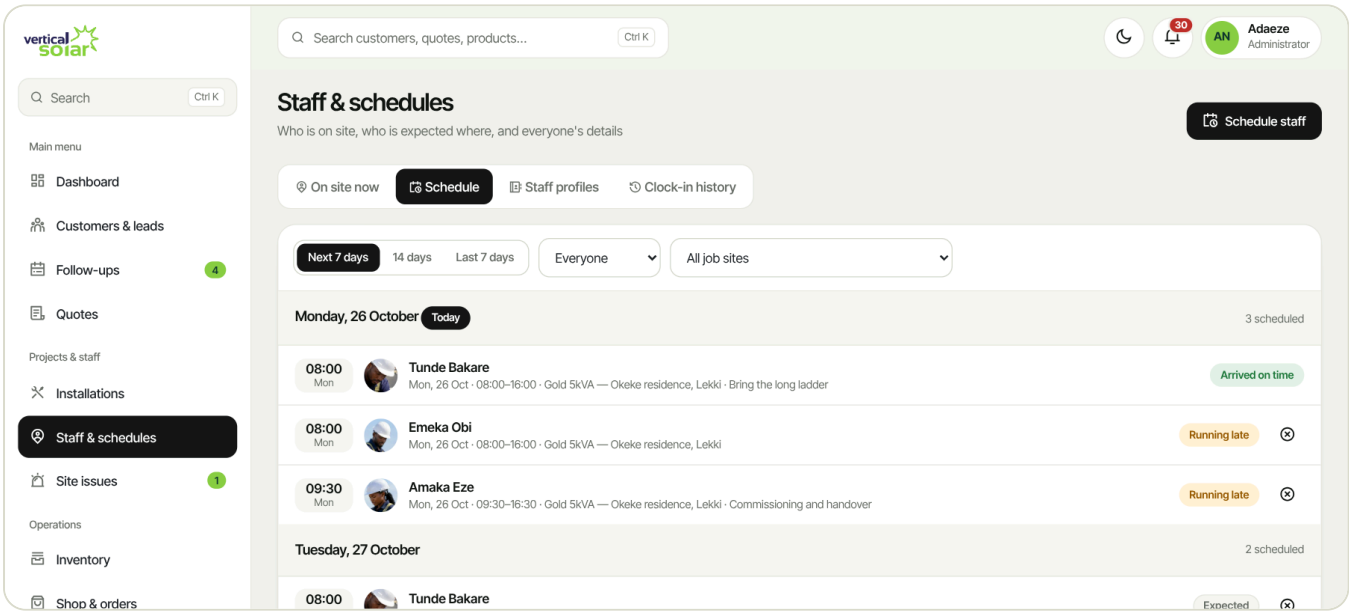

Schedule staff on site.

4. Add a **note for the crew** (“Bring the long ladder”) and click **Save schedule**.
5. If anyone clashes, a **Schedule clash** window lists who is expected where. Untick them or change the time — or click **Schedule anyway**. Days that are already on the schedule are never added twice.

Reminders and late alerts

When	Who is told
When you save the schedule	Each person: “You’re scheduled at …”.
About 1 hour before	Each person: “Starting soon”.
10 minutes after the start, not clocked in	The person: “You’re running late”. Their schedule shows **Running late**.
30 minutes after the start, not clocked in	**You**: “… hasn’t arrived at …” (with a phone alert).
4 hours after the start	Marked **Missed**.

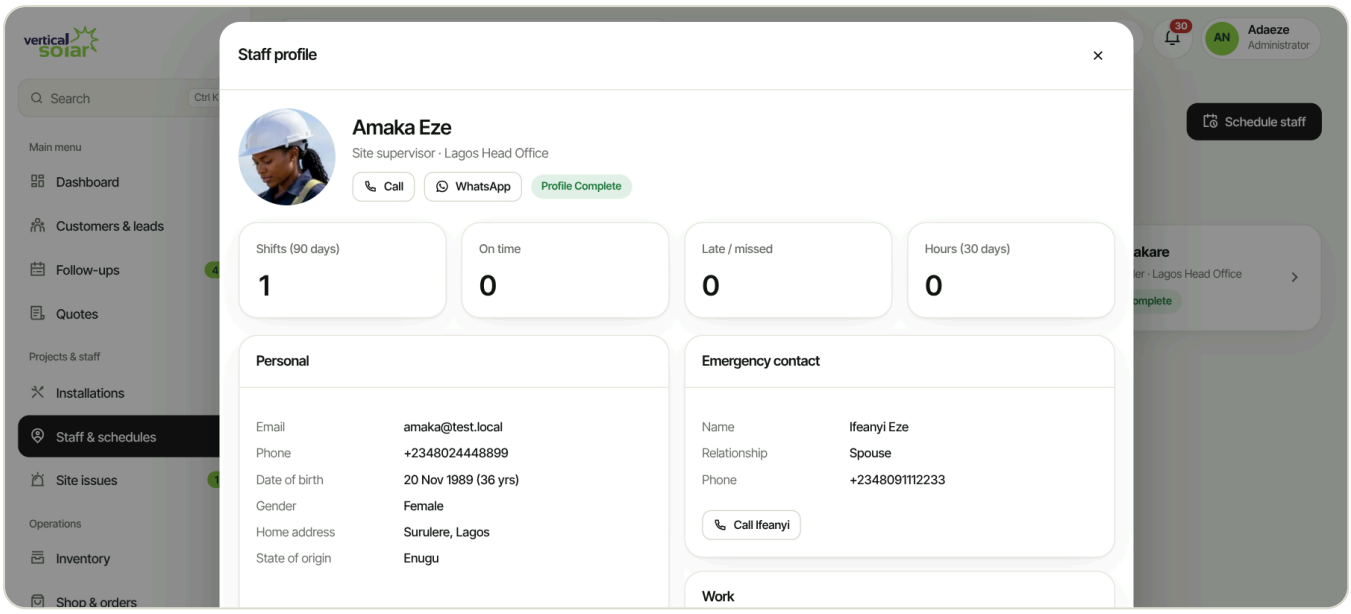

Times are Lagos time. When the person clocks in, the schedule shows **Arrived on time** or **Arrived 25 min late** (more than 10 minutes counts as late).

The Schedule tab: next 7 or 14 days, or the last 7. Filter by person or site. ⊗ cancels a schedule (the person is told).

Staff profiles

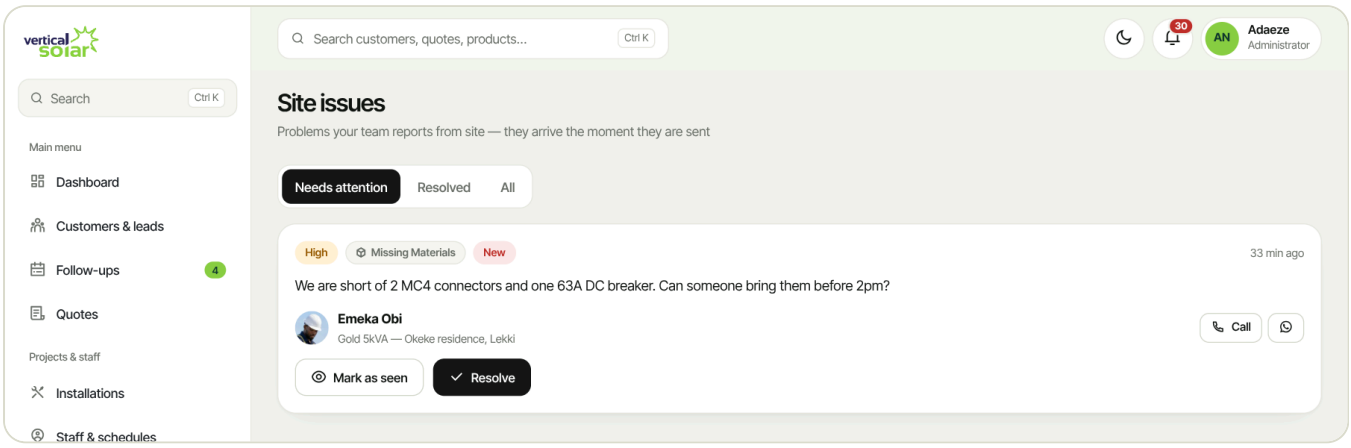

Every staff member fills in their profile the first time they sign in: photo, phone, date of birth, home address, emergency contact and work details. Click a person in **Staff profiles** to see it all, plus their attendance for the last 90 days: shifts, on time, late or missed, and hours worked in the last 30 days. The **Call** and **WhatsApp** buttons, and **Call** under the emergency contact, work from your phone.

A staff profile as the administrator sees it.

10 Site issues

Problems staff report from site — missing materials, faulty equipment, safety, customer or access problems. They arrive the moment they are sent, not at the end of the shift.

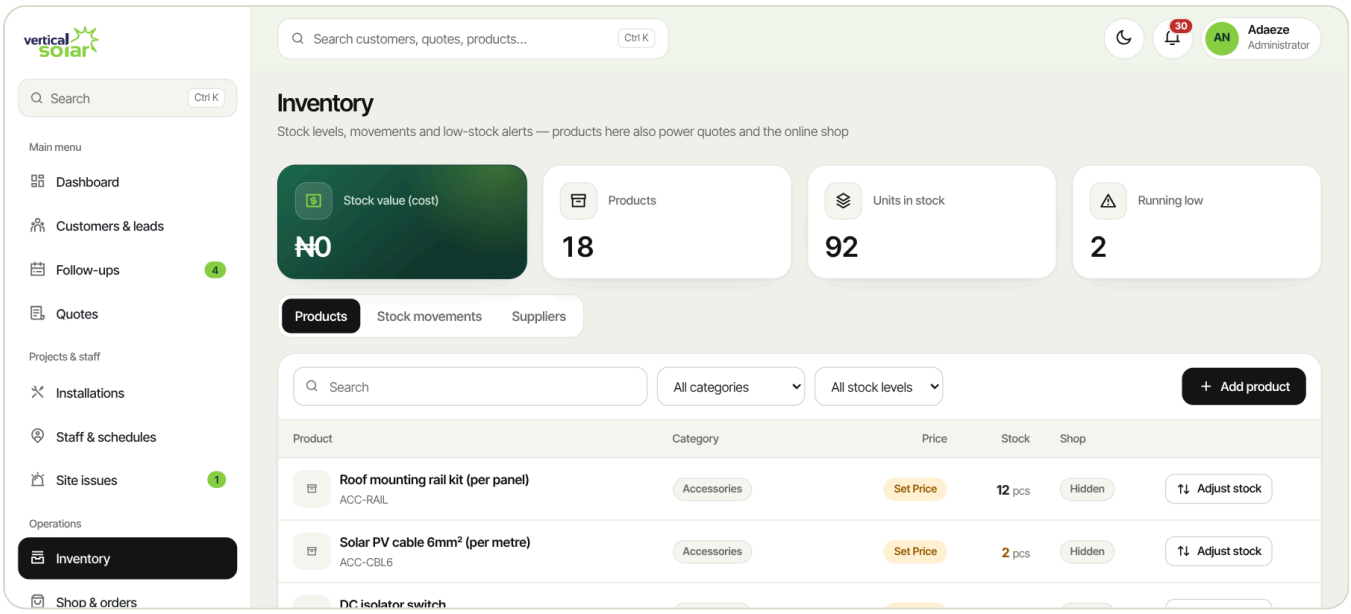

Needs attention, with urgency, type, who sent it and from which job.

- Urgent issues come first and send you a phone alert. Urgency levels: **Can wait**, **Today**, **Soon**, **Urgent**.
- **Call** or WhatsApp the person straight from the issue. Photos open full size when clicked.
- **Mark as seen** tells the staff member you are on it, with an optional reply (“Driver bringing them at 1pm”).
- **Resolve** closes it, with an optional reply. The staff member is notified either way, and sees the status **New** → **Seen** → **Resolved** in their app.

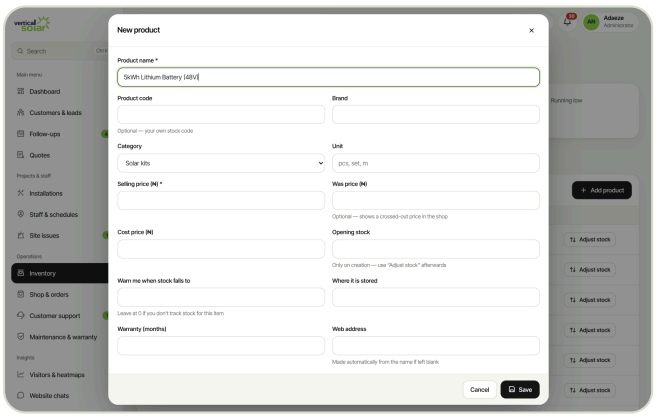

11 Inventory

Every product you stock or sell: prices, stock levels, where it is kept, and low-stock warnings. Products marked “Show in online shop” appear on the website.

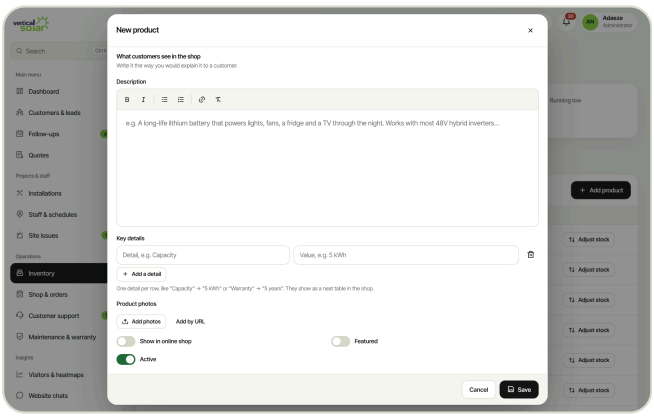

Stock value, number of products, units in stock and items running low. Tabs: Products, Stock movements, Suppliers.

Add a product

Name, prices and stock.

What customers see in the shop.

1. Click **Add product**. Type the **product name** as customers would say it (“5kWh Lithium Battery (48V)”).
2. Choose the **category**, **brand** and **unit** (pcs, set, metre). Product code is optional.
3. **Selling price** (required), **Was price** (optional — shows a crossed-out price in the shop), and **Cost price** (only you see this; it is used for the stock value).
4. **Opening stock** — how many you have now. Later changes are made with **Adjust stock**.
5. **Warn me when stock falls to** — for example 3. Leave at 0 if you don’t track this item. **Where it is stored** and **Warranty (months)** are optional.
6. **Description** — write it the way you would explain it to a customer. Use the toolbar for bold, lists and links.

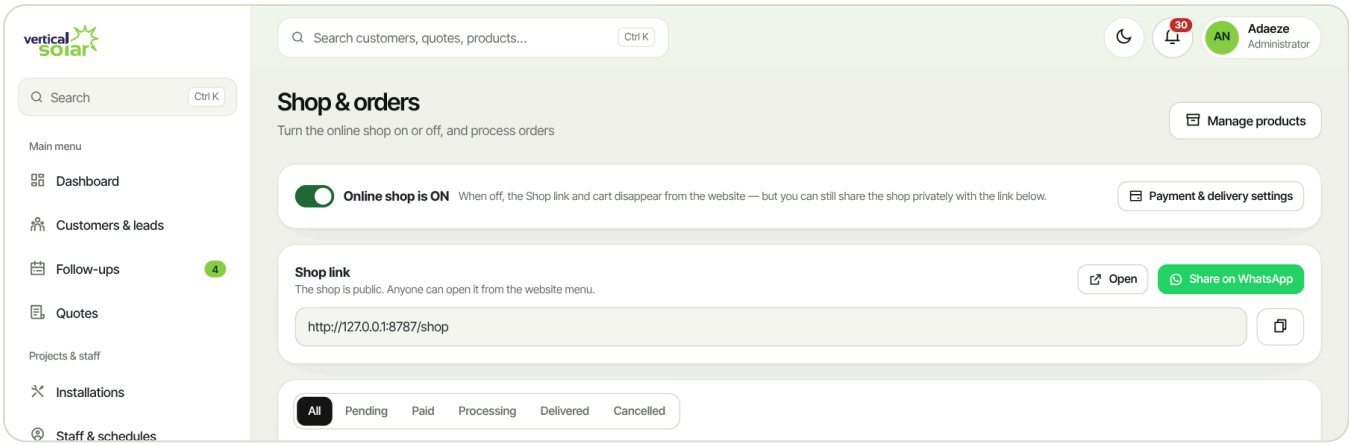

7. **Key details** — one detail per row: “Capacity” → “5 kWh”, “Warranty” → “5 years”, “Cycles” → “6000”. Click **+ Add a detail** for more rows. They show as a neat table in the shop.
8. **Product photos** — **Add photos** to upload, or **Add by URL**. The first photo is the main one.
9. Switch on **Show in online shop** to sell it on the website, **Featured** to show it on the shop’s front, and keep **Active** on. Click **Save**.

Stock in and out

Click **Adjust stock** on a product to record goods received, items used on a job, returns or corrections, with a note. Every change is listed in **Stock movements**. Keep supplier contacts under **Suppliers**. When stock reaches the warning level you get a notification and it appears on the dashboard.

12 Shop & orders

Turn the online shop on or off and handle orders.

Shop & orders.

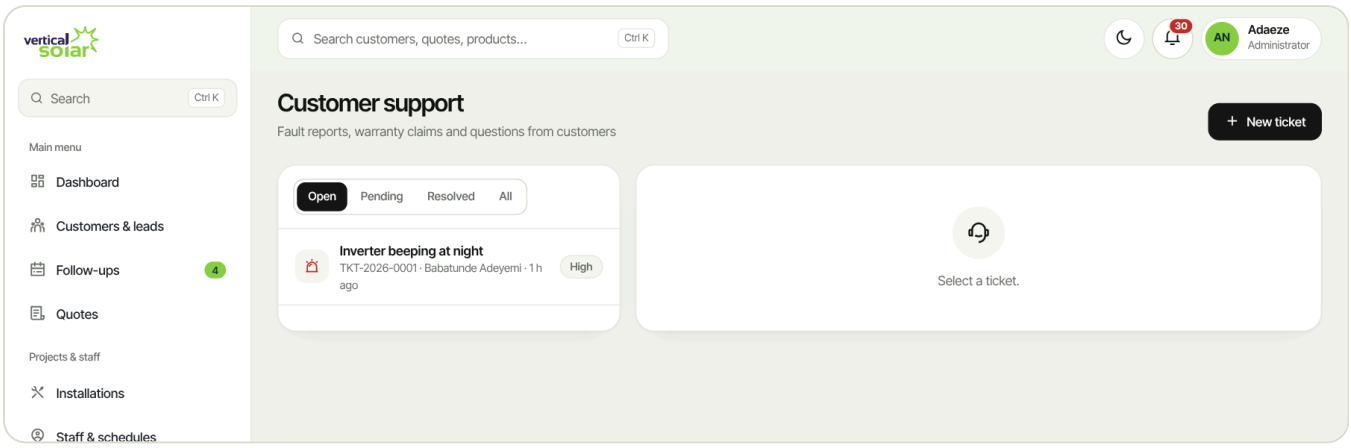

- **Online shop is ON/OFF** — when off, the Shop link and cart disappear from the website menu and visitors are invited to request a quote instead.
- **Private shop link** — even when the shop is off, you can share it privately. Copy the link or click **Share on WhatsApp**. Only people with the link can open the shop, see prices and order. **New link** makes a fresh one and the old link stops working. When the shop is on, the same box shows the public shop link.
- **Payment & delivery settings** — choose *Order request* (you confirm by phone; no online payment) or *Allow online payment with Paystack*, set a flat delivery fee and bank transfer details (chapter 22).
- Orders move through **Pending** → **Paid** → **Processing** → **Delivered**, or **Cancelled**. Click an order to see items, customer, delivery address and payment, and to change its status. Marking an order Paid or Processing takes the items out of inventory automatically.

Card payments

Paystack handles the card details — they never pass through or get stored by your website. Paid orders are confirmed with Paystack before they are marked Paid.

13 Customer support

Fault reports, warranty claims and questions from customers — from the website support form, or added by you when a customer calls.

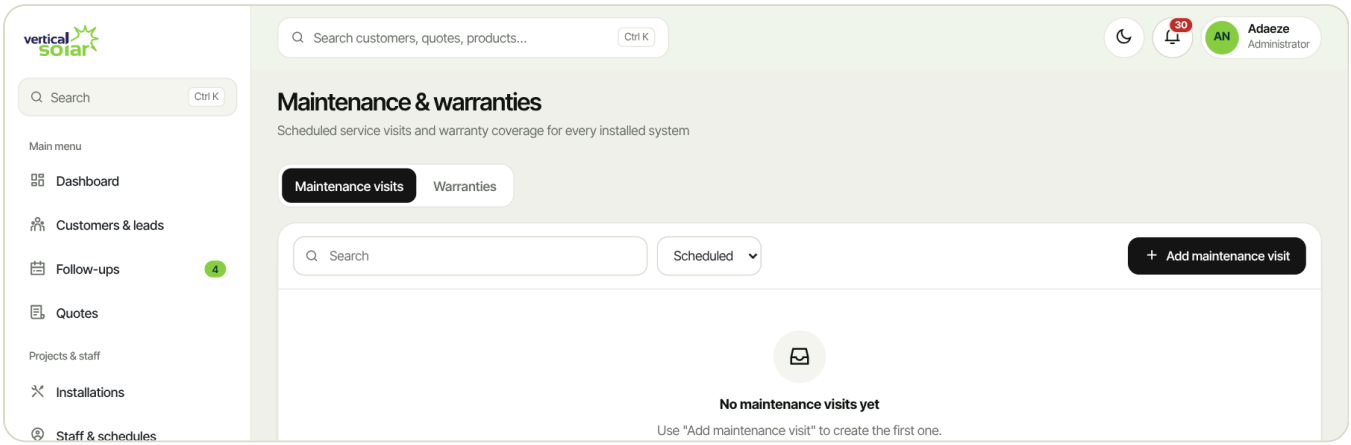

Tickets on the left; the selected ticket on the right.

1. Click a ticket to open it. You see the customer, the subject, priority and the message.
2. Contact the customer by phone or WhatsApp (or send an email from the Email page).
3. Write an **update or note** on the ticket (what you did, what is next) and save it, choosing the new status: **Open** (needs action), **Pending** (waiting for the customer or a part) or **Resolved**. Updates are your team's record — they are not sent to the customer.
4. Set the **priority** (Low, Normal, High, Urgent) and who it is **assigned to**.
5. Need a technician? Schedule a maintenance visit from **Maintenance & warranty**.

Use **New ticket** to log a phone call. Each ticket gets a number such as TKT-2026-0001 that the customer can quote.

14 Maintenance & warranty

Service visits and warranty cover for every installed system.

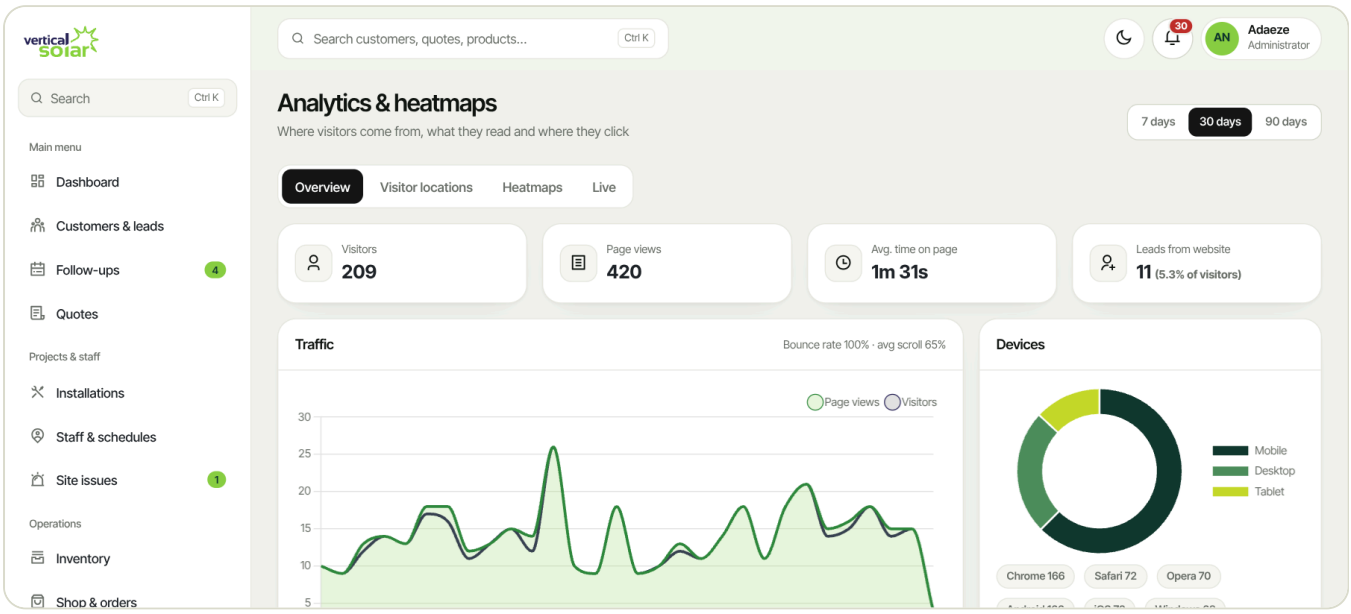

Maintenance visits and warranties.

- **Maintenance visits** — click **Add maintenance visit**, choose the installation, the date and time, the type (routine service, panel cleaning, inspection, repair…) and the technician. Afterwards set the status to **Done**, enter the charge if any and the findings or work done. **Marking a visit done schedules the next one automatically.**
- Completed installations get their first visit automatically (chapter 8). A follow-up reminds you when a visit is due.
- **Warranties** — workmanship warranties are created when you mark a job completed. Add product warranties (panels, inverter, battery) with their end dates. Use the “expiring” filter to see warranties ending in the next 60 days, and contact those customers.

15 Visitors & heatmaps

Who visits the website, from where, on which device, what they read, and where they click.

Overview for the last 7, 30 or 90 days.

Overview	Visitors, page views, average time on page, leads from the website and conversion rate; traffic over time; devices, browsers and phones; top pages; where visitors come from (Google, Instagram, WhatsApp, direct); leads by form; languages used; busiest hours.
Visitor locations	A map and list of cities visitors come from.
Heatmaps	Pick a page and a device (phone, tablet, computer) to see where people click, where they move the mouse, and “rage clicks” (repeated clicks on something that doesn’t respond). Use it to check that people find the “Get a free quote” button.
Live	Who is on the website in the last 5 minutes and which page they are on.

Always on, no cookies

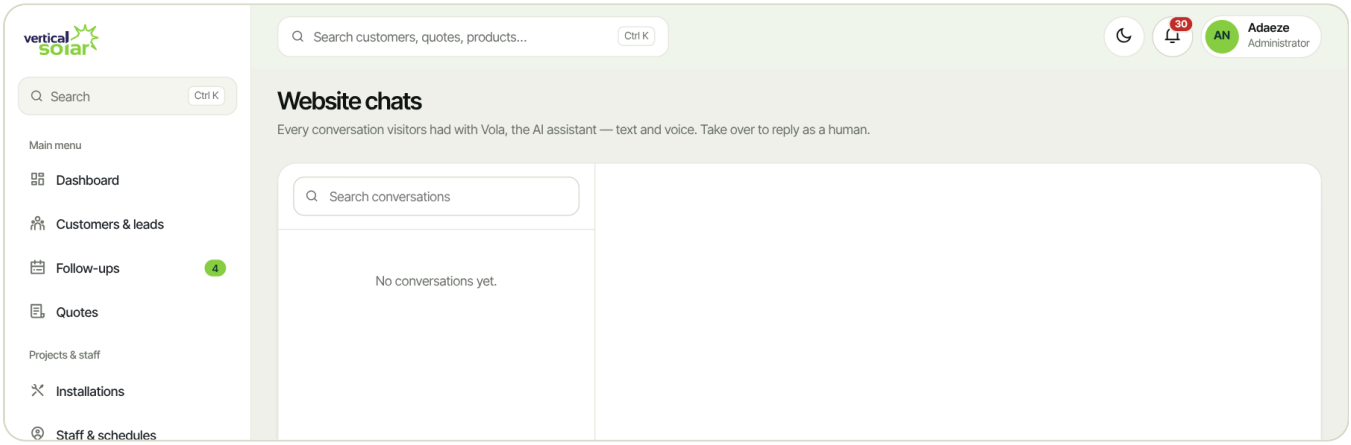

Visitor counting always runs. It does not use cookies or store IP addresses, so no consent banner is needed for it. Click recording for heatmaps is the only part a visitor can switch off. Google Analytics is optional: add its ID in Website content → SEO & features, and it only loads for visitors who allow it.

16 Website chats and the AI assistants

There are two assistants: **Vola**, who chats with visitors on the website, and the **AI sales assistant** inside the CRM, who helps you and your sales staff.

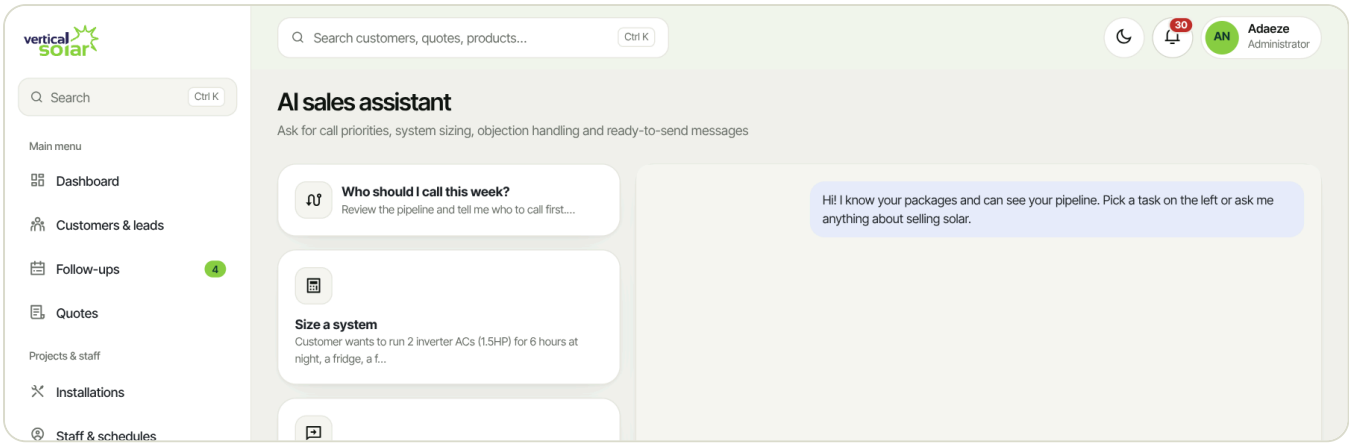

Vola on the website

- Visitors can type or talk. Vola understands and replies in **English, Nigerian Pidgin, Yorùbá, Igbo and Hausa** — the visitor picks the language in the chat window, and can expand the chat to a bigger window.
- Every reply has a **Listen** button. While Vola is speaking it becomes **Pause**, then **Resume**; in voice mode the visitor can pause and resume the same way.
- Vola can read replies aloud in a **Nigerian voice**. With the optional Spitch voice service connected (chapter 22) the voices are natural Nigerian voices for each language; without it, the phone's own Nigerian-English voice is used.
- Vola answers from your packages, branches, FAQs and shop. Add anything else it should know in **Website content → AI assistant**: promotions, delivery areas, what you don't do ("We do not install in Sokoto"). Change the assistant's name and greeting there too.
- When a visitor is interested, Vola asks for their name and phone number. As soon as a Nigerian phone number is shared in the chat, a lead is created (or updated) with the conversation attached.
- Switch the chat or voice off in **Website content → SEO & features**.

Website chats: every conversation. Open one to read it and take over to reply as a person.

AI sales assistant (inside the CRM)

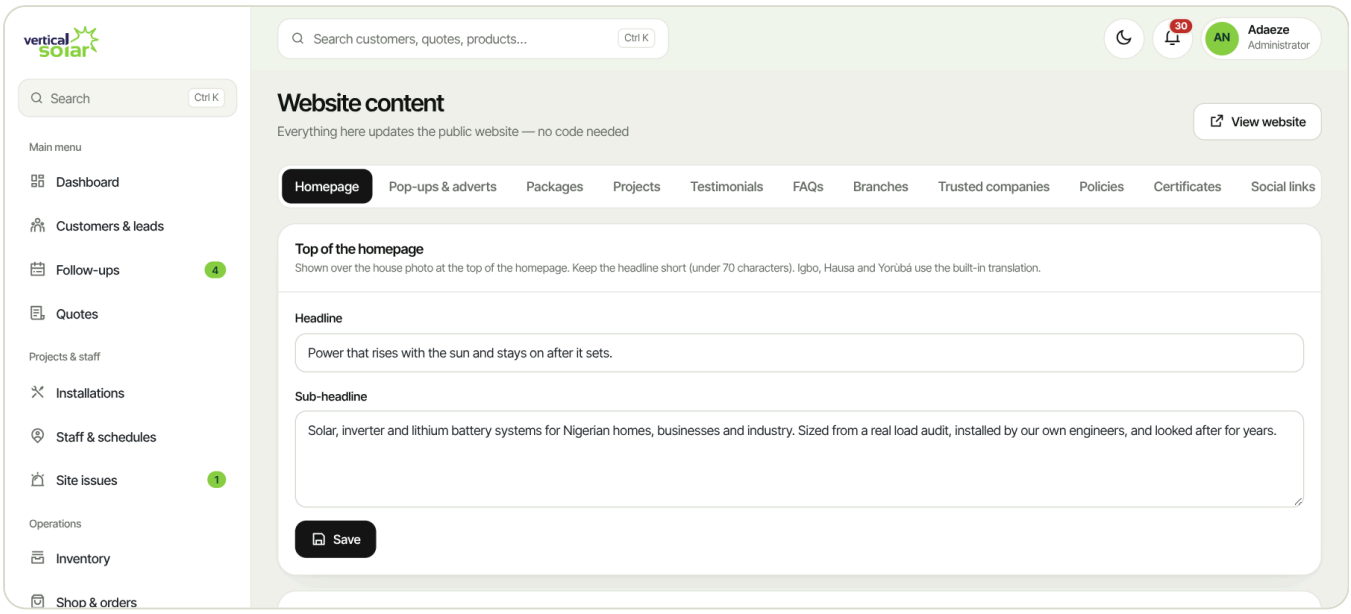

Pick a task on the left or ask anything.

It knows your packages and can see your pipeline. Try: “Who should I call this week?”, “Size a system for 2 inverter ACs for 6 hours at night, a fridge and lights”, “The customer says solar is too expensive compared to their generator”, or “Write a WhatsApp broadcast for harmattan panel cleaning”. **Always check AI suggestions before sending them to a customer.**

17 Website content

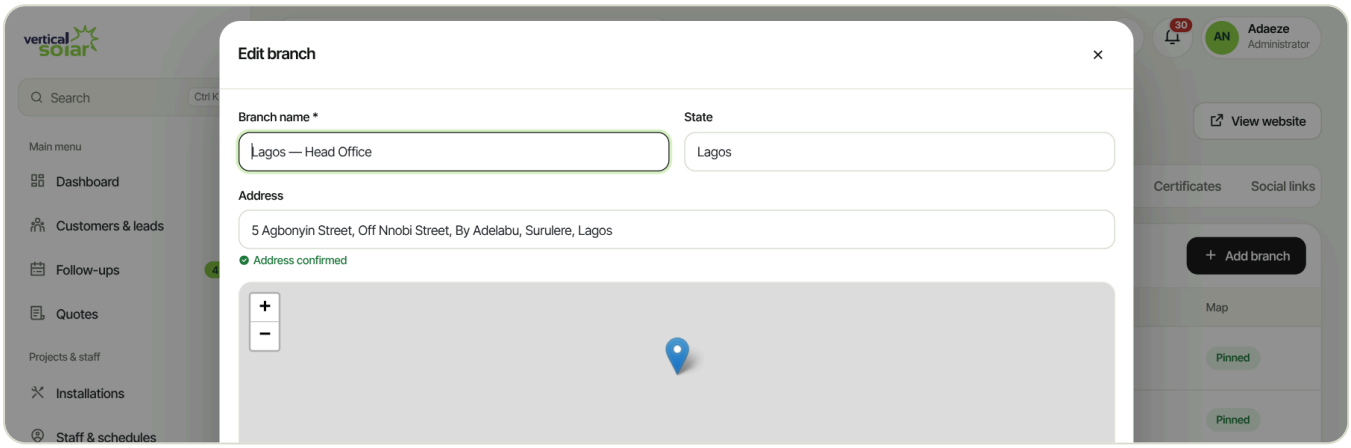

Change the public website yourself — no code. Each tab is a part of the site. Changes are live as soon as you save. Click **View website** to check.

Website content, Homepage tab.

Tab	What you change there
Homepage	The headline and sub-headline at the top of the homepage (keep the headline under 70 characters), and the headline numbers (years of experience, installations completed, client satisfaction).
Pop-ups & adverts	Promotions that appear on the website (chapter 18).
Packages	The solar packages, their sizes and prices. These drive the packages page, the cost estimator, quotes and Vola's answers.
Projects	Completed projects with photos.
Testimonials	Customer reviews, shown on the Testimonials page and in **What our customers say** on the homepage (before the questions). Customers can send a review with the form on the Testimonials page; it arrives here marked **Not published — check and publish** and you get a notification. Open it, check it (add a photo of their installation if you have one, tick Verified if it matches a job) and switch on **Published** — or delete it. Until one is published, the homepage invites customers to share their review. Only add real reviews from real customers, with their permission.
FAQs	Questions and answers shown on the FAQ page and used by Vola. The first six (in their set order) also appear on the homepage.
Trusted companies	The logo strip near the top of the homepage. Upload each company's logo (transparent PNG or SVG); without a logo the name is shown. The eight rows marked Sample (Brightway Foods, Kora Suites…) are made-up placeholder logos — replace them with real customers' logos (with their permission) or delete them.

Branches	Office locations. Type the address and pick it from the list so the map pin is right; add phone numbers, email, opening hours, and mark the head office.
Policies	Privacy, terms, installation, support & warranty and accessibility pages (chapter 19).
Certificates	Licences and certifications (with images or links) shown in the website footer.
Social links	Your social media pages (Instagram, Facebook, TikTok…) with an icon for each, shown in the footer.
SEO & features	The default title, description and share image for Google and WhatsApp previews; Google Analytics ID (optional); switch the AI chat, voice, testimonials and blog on or off.
AI assistant	Vola's name, greeting and extra knowledge.

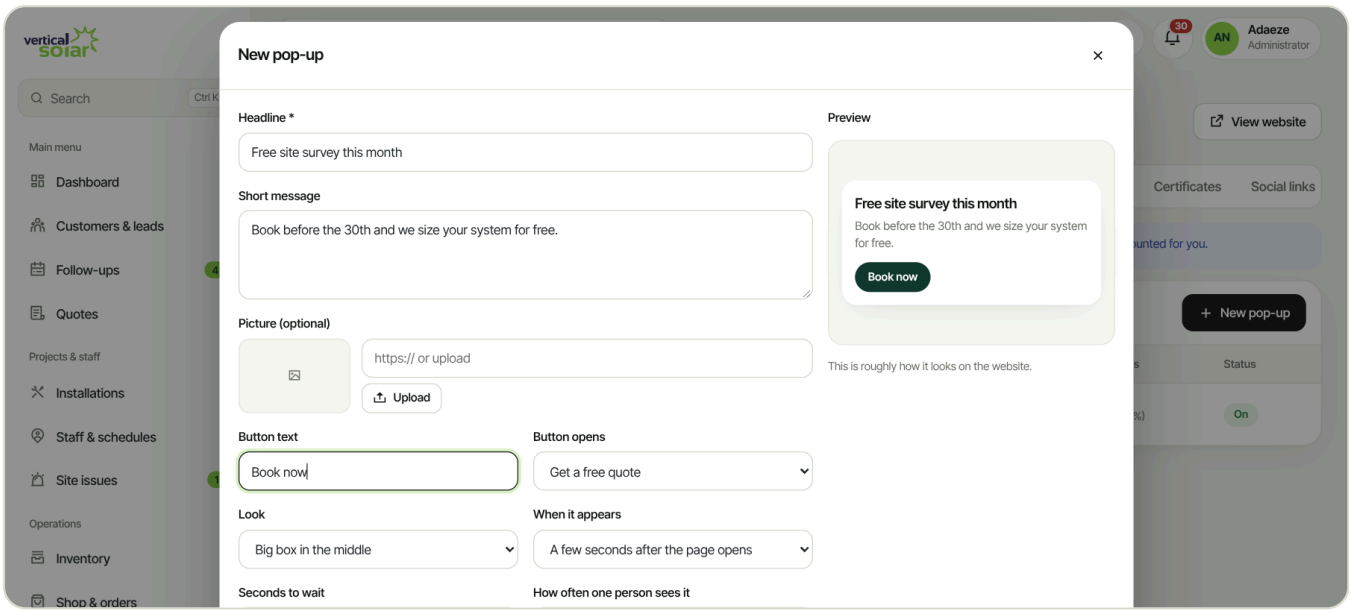

Editing a branch: pick the address from the list and the pin moves there.

Translations

Visitors can switch the website to Nigerian Pidgin, Yorùbá, Igbo or Hausa. Fixed text is translated already. Text you change here is translated automatically for visitors who pick another language.

18 Pop-ups and adverts

A small box that appears on the website to announce an offer — “Free site survey this month”, “Buy now, pay later”. The preview on the right shows how it will look as you type.

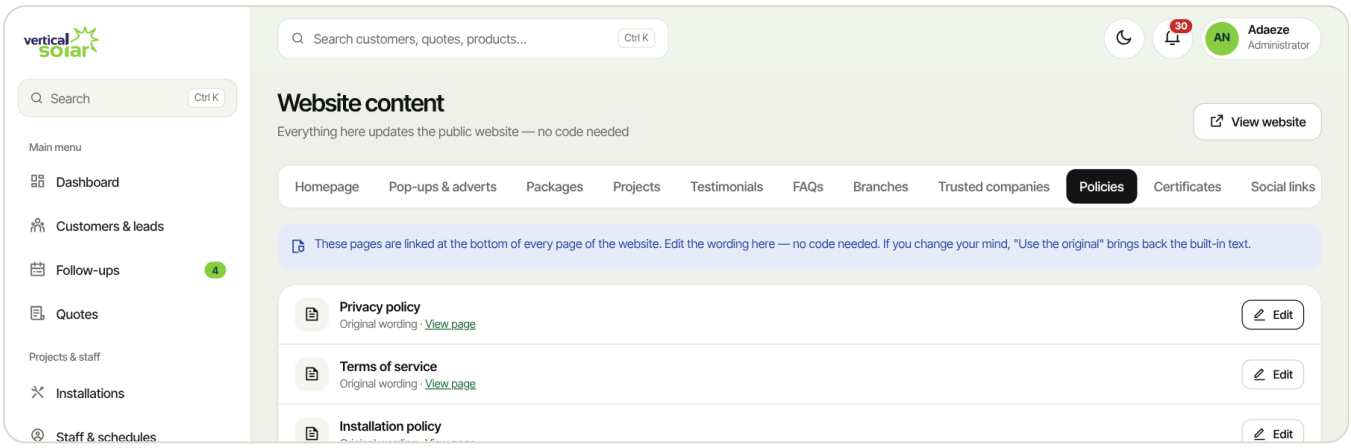

Creating a pop-up. The button destination is chosen from a list.

1. Go to **Website content** → **Pop-ups & adverts** and click **New pop-up**.
2. **Headline** (short), **short message** (one or two sentences), and optionally a **picture** (upload, or paste a web address).
3. **Button text** (“Book now”) and **Button opens**: pick from the list — any website page (Get a free quote, Packages, Shop, Contact, solution pages…), or *Open the chat assistant*, *Call the office*, *WhatsApp the office*. Choose *Another web address…* to type any link, or *No button*.
4. **Look**: big box in the middle, small card in the corner, or thin strip across the top.
5. **When it appears**: a few seconds after the page opens (set the seconds), straight away, when they scroll halfway down, or when they move to leave (computers only). **How often one person sees it**: once per visit, only once ever, or on every page they open.
6. **Show it on**: every page, or only some pages (tick them).
7. Optional **start** and **stop** dates so it runs only for the promotion. Keep **Switched on** ticked and click **Save**.

The list shows each pop-up with its look, pages, how many times it was **viewed** and **clicked** (with the click rate) and whether it is On or Off. Click a pop-up to edit or switch it off. Keep one pop-up running at a time — more becomes annoying.

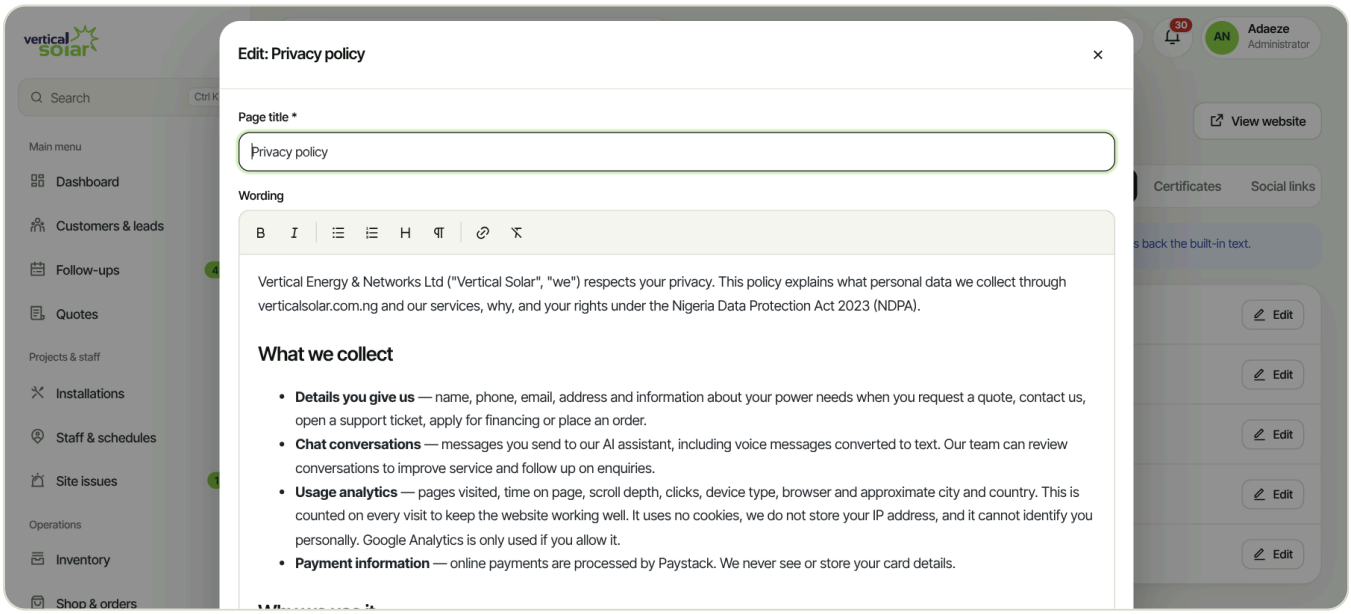

19 Website policies

You can edit the Privacy policy, Terms of service, Installation policy, Support & warranty policy and Accessibility statement yourself.

Website content → Policies.

1. Click **Edit** next to the policy.
2. Change the **page title** if needed and edit the **wording**. Use the toolbar for headings, bold, lists and links.
3. Click **Publish**. The page is updated immediately with the new “last updated” date.

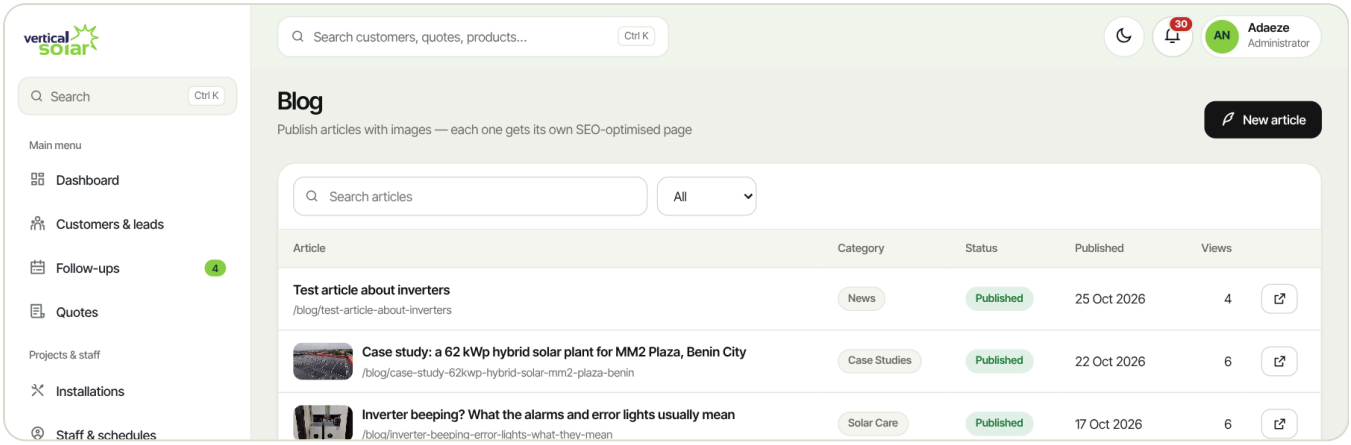

Editing the privacy policy.

Until you edit a policy, the website shows the built-in wording (“Original wording”). To go back to it, choose **Use the original**.

> **Take legal advice for big changes**
>
> The built-in policies were written for Nigerian law, including the Nigeria Data Protection Act 2023. If you change how you collect or use personal data, have the wording checked by your lawyer.

20 Blog and email

Blog

Blog posts.

1. Click **New article**. Write the title and the article, with images.
2. Add a **cover image** (1200×630 is ideal), the **category**, an **excerpt** (one or two sentences shown on the blog list) and the author. The web address is made from the title.
3. Optional: **SEO title** and **meta description** (about 150 characters that make people click in Google).
4. Leave the status as **Draft** while you work. Set it to **Published** and choose the publish date. A future date schedules it for that day.

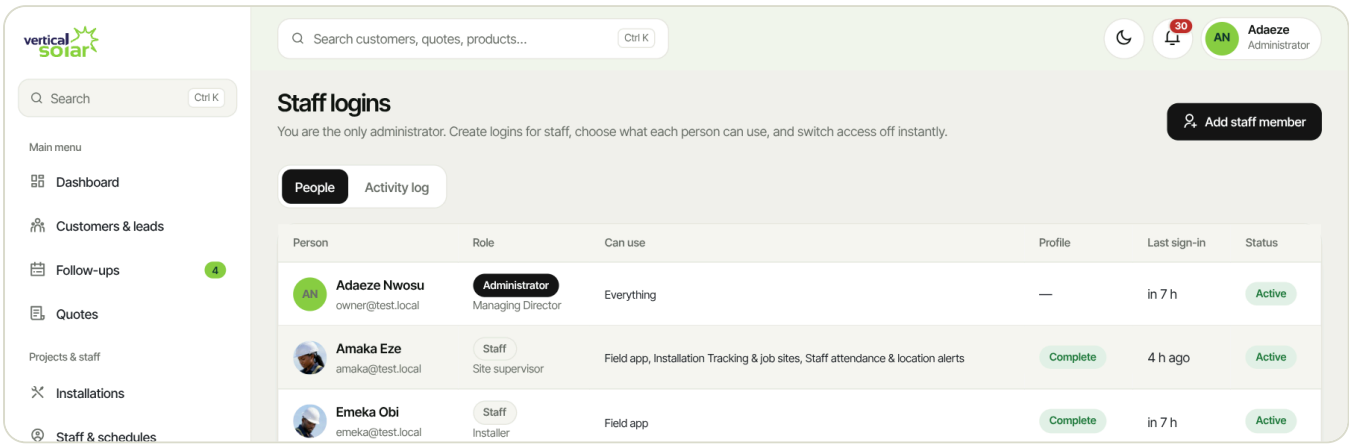

Good topics: “How much solar do I need for a 1.5HP AC?”, “Lithium vs tubular batteries”, real project stories with photos. Articles help you appear on Google.

Email

Send an email to one or several customers: type the addresses (or open it from a customer’s **Email** button), choose a template (Enquiry follow-up, Maintenance reminder, Thank-you & review request) or start blank, write the subject and message and send. Email needs the email service connected and your “from” address set (chapter 22).

21 Staff logins

Create a login for each staff member, choose what they can use, reset passwords and switch access off instantly. You are the only administrator.

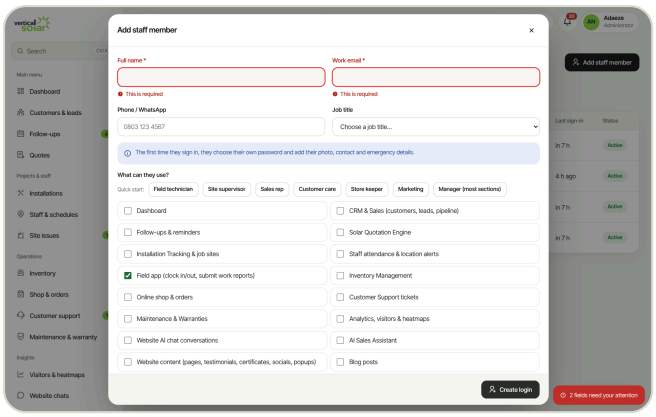

Staff logins: role, what each person can use, profile status and last sign-in.

Add a staff member

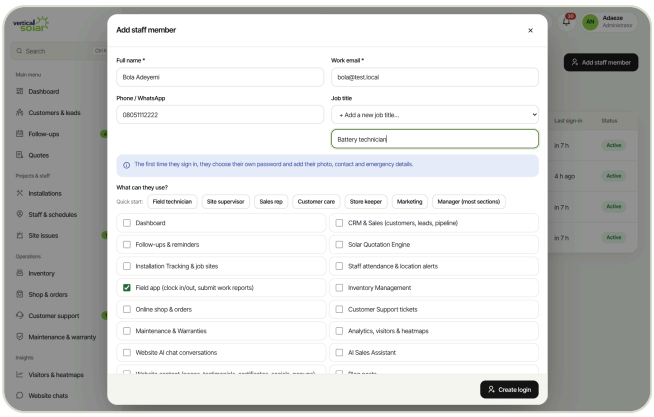

1. Click **Add staff member**. Enter their **full name**, **work email** (this is their login) and **phone**.
2. **Job title** is a list: Installer, Lead installer, Electrician, Site supervisor, Sales representative and so on. If the title you need is not there, choose **+ Add a new job title...** and type it. New titles are remembered and appear in the list next time.
3. Under **What can they use?**, click a **Quick start** button to tick the usual sections, then adjust:

Field technician	Field app only.
Site supervisor	Field app, installations, staff attendance, maintenance.
Sales rep	Dashboard, customers, follow-ups, quotes, AI assistant, website chats.
Customer care	Dashboard, customers, follow-ups, support, maintenance, chats, email.
Store keeper	Inventory and shop.
Marketing	Dashboard, website content, blog, analytics, email, chats.
Manager (most sections)	Everything except the field app. Staff logins and Settings always stay with you.

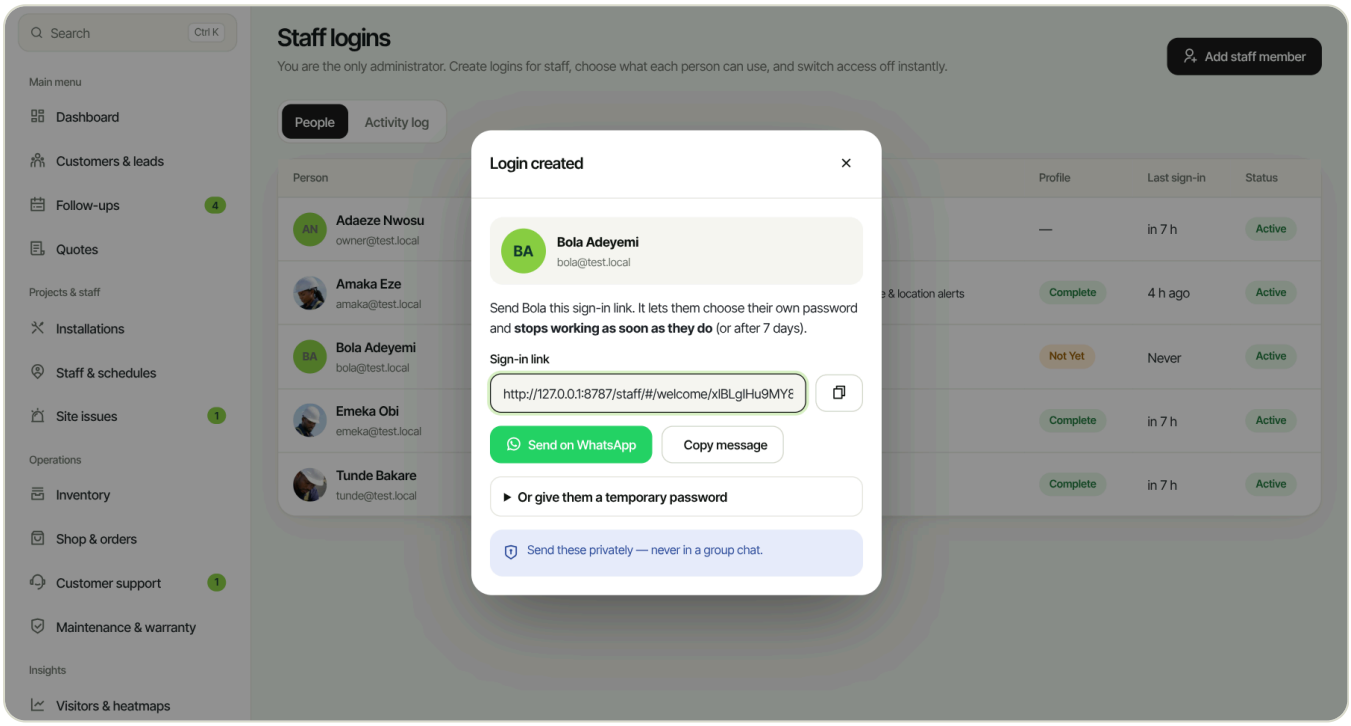

4. Click **Create login**. If a required box is empty or the email is not valid, that box turns **red** with a message under it.
5. The **Login created** window shows a private **sign-in link**. Click **Send on WhatsApp** to open a chat with the staff member (the message and link are written for you), or **Copy message** / the copy button to paste it anywhere. On a phone, **Share...** opens your share menu.
6. The link lets them choose their own password. It **stops working as soon as they set their password**, or after 7 days. If you prefer, open **Or give them a temporary password** instead — it is shown only once.

Missing details are outlined in red where they are needed.

Job title: pick from the list, or add a new one.

Login created: send the sign-in link on WhatsApp or copy it.

The first time they sign in, they must choose their own password and fill in their profile with a photo — they cannot use the app until they do. You get a notification when they finish, and the **Profile** column changes from Not yet to Complete.

Change, reset or revoke

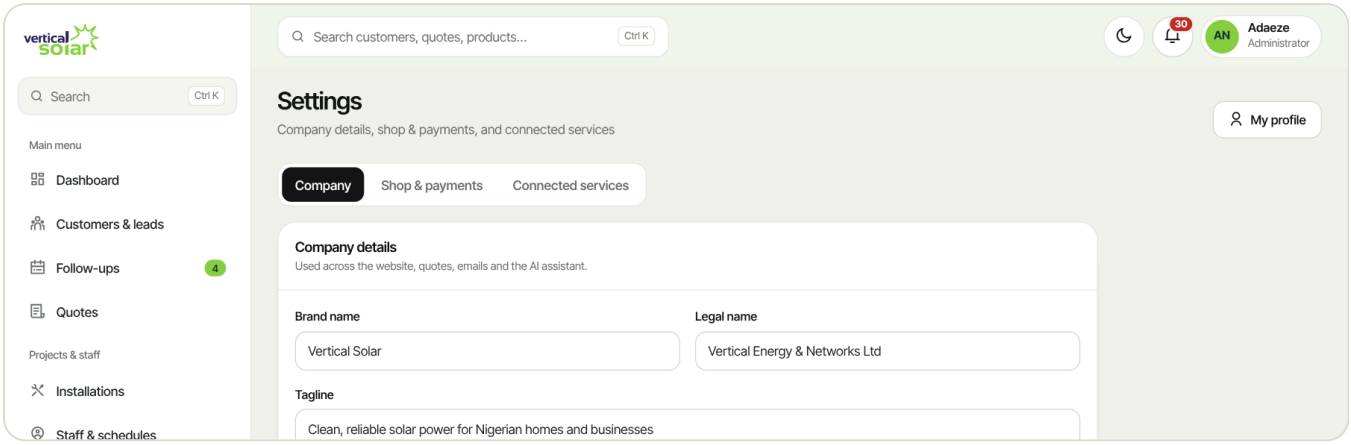

Click a person's row:

- Change their name, email, phone, job title or sections, and Save. If you change their sections, they are signed out and see the new menu when they sign in again.
- Reset password signs them out and gives a new sign-in link (and a temporary password), shared the same way. Use it when someone forgets their password.
- Revoke access signs them out everywhere immediately and blocks the login. Use it the day someone leaves or loses their phone. Restore access undoes it. Their history stays.

- The bin icon deletes the login for good (their records stay). Revoking is usually better.
- **View their profile** opens their staff profile.

To change **your own** login email, click your own row. **Activity log** shows who did what and when — sign-ins, changes to staff, quotes, settings.

22 Settings and your profile

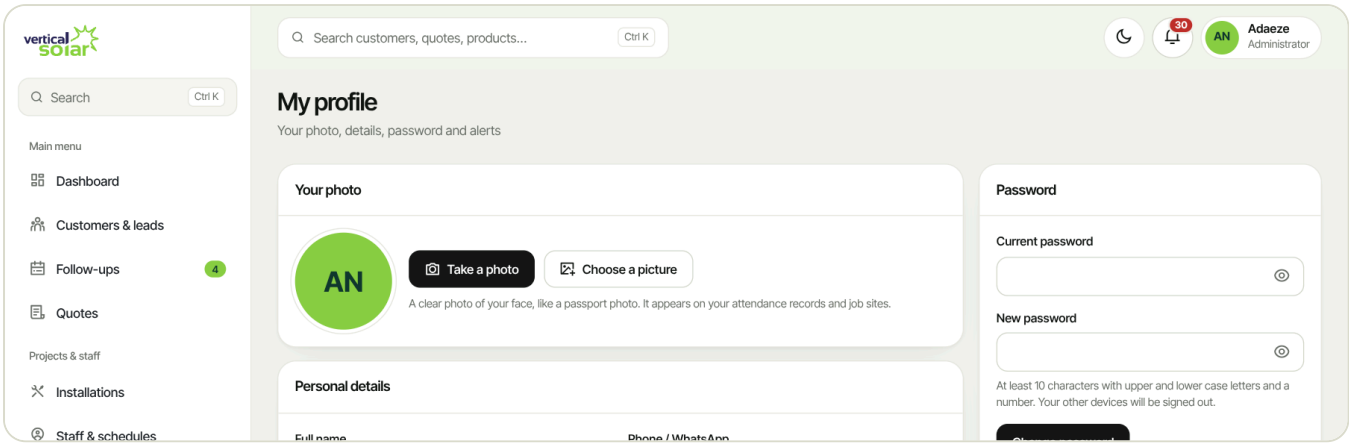

Settings: Company, Shop & payments, Connected services.

Tab	What is there
Company	Brand and legal name, tagline, public email, phone numbers (the first is the main one), WhatsApp number in international format (2348…), year founded, head office address, opening hours and RC number. Used across the website, quotes, emails and by Vola.
Shop & payments	Shop on/off, checkout type (order request or Paystack), Paystack public key, delivery fee and note, bank transfer details shown after ordering and on quotes.
Connected services	Email “from” name and address, who receives the morning summary email (new leads, due follow-ups, low stock, expiring warranties), the spam-protection site key, and a status line showing whether email sending, spam protection and Nigerian voices are connected (✓ or ×).

Secret keys are not entered here

Secret keys — the Paystack secret key, the email service key, the spam-protection secret and the Spitch voice key — are stored as protected secrets in Cloudflare by your developer, never typed into the CRM. Connected services shows which are set up. The Spitch voice key is optional: without it, Vola still talks, using the phone’s Nigerian-English voice.

My profile

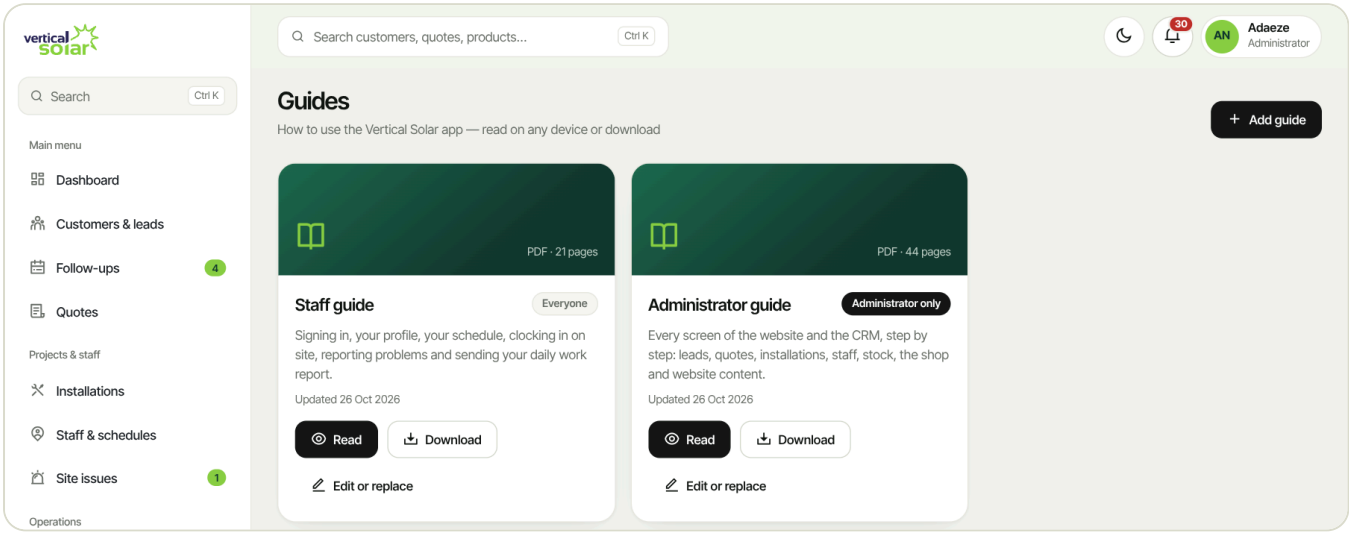

Your photo, details, password and alerts.

Add your photo and contact details, change your password (at least 10 characters with upper and lower case letters and a number — your other devices are signed out), and turn on phone alerts for this device.

23 Guides for your team

The staff guide and this administrator guide are inside the app under **Guides** (bottom of the menu). Every staff member can read the staff guide on their phone; this guide is shown to you only.

Guides: read, download, or edit and replace.

- **Read** opens the guide in the app (on a phone it opens in the phone's PDF viewer). **Download** saves the PDF.
- **Edit or replace** — change the title or description, choose **Who can read it** (Everyone with a login, or Administrator only), or click **Upload PDF** to replace the file. The new version is what everyone sees straight away.
- **Add guide** adds more documents — a safety checklist, a price list for sales staff. Switch off **Show in the app** to hide one without deleting it.

24 Security and privacy

What is built in

- Passwords are stored scrambled (hashed) and never shown to anyone. Sign-ins expire after 7 days. Repeated wrong passwords are slowed down.
- Staff only see the sections you tick. Only you can create logins and change settings.
- Every change to staff, quotes and settings is recorded in the Activity log.
- The website and CRM run over HTTPS with strict security headers; forms are protected against spam and abuse.
- Staff location is only collected while they are clocked in.
- Card payments go directly to Paystack.

Your part

- [ ] Use a long password that you don't use anywhere else. Never share your login — create a staff login instead.
- [ ] Revoke access the same day someone leaves or loses their phone.
- [ ] Give each person only the sections they need.
- [ ] Send sign-in links and temporary passwords privately, never in a group chat.
- [ ] Don't put customers' personal details in public places (website text, blog, pop-ups).
- [ ] Only publish real testimonials, with the customer's permission.

Privacy (Nigeria Data Protection Act 2023)

The privacy policy explains what you collect and why. If a customer asks to see their data, open their record (or search for them and use Export CSV). If they ask you to delete it, open their record → **Edit** → **Delete customer**; their record, timeline, follow-ups and warranties are removed, while quotes, jobs, orders and tickets you must keep for your accounts stay. Reply to such requests within 30 days.

25 Your daily, weekly and monthly routine

Every morning (15 minutes)

Dashboard: new leads, open quotes, Operations cards.

Follow-ups: clear Overdue and Today.

Today on site: is everyone there? Call anyone late.

Site issues: mark seen or resolve.

Notifications: read, act, close.

During the day

- [ ] Call new leads within the hour.
- [ ] Send quotes the same day as the survey.
- [ ] Review work reports and photos.
- [ ] Reply to support tickets.

Every week

- [ ] Schedule next week's crews in Staff & schedules.
- [ ] Check Clock-in history for late or missed shifts.
- [ ] Check Inventory for low stock; order from suppliers.
- [ ] Read a few Website chats to see what people ask; add answers to FAQs or Vola's knowledge.
- [ ] Ask the AI assistant "Who should I call this week?".

Every month

- [ ] Visitors & heatmaps: which pages bring leads?
- [ ] Update packages and prices if costs changed.
- [ ] Add new projects and real testimonials.
- [ ] Publish one or two blog articles.
- [ ] Check warranties expiring soon and maintenance due.
- [ ] Review Staff logins: remove anyone who has left.

26 Questions and fixes

Question	Answer
A staff member forgot their password	Staff logins → click their row → Reset password. Send them the new sign-in link privately.
I forgot my own password	Your developer can reset the owner password. Keep it in a safe place.
A staff member can't clock in on site	Check the job's site pin and clock-in zone on the installation page. Make the zone bigger for large compounds, or move the pin. Check their phone allows location.
A staff member says they didn't get reminders	Ask them to turn on alerts in My profile (and, on iPhone, use the Home Screen app). Reminders also show in their bell.
A staff member forgot to clock out	The shift closes itself after 14 hours at the time of their last location. Correct the times with them if needed.
Someone can see a section they shouldn't	Staff logins → their row → untick it → Save. They are signed out straight away.
A customer says the quote link doesn't open	Open the quote → Send → Copy the link and send it again. Check the quote is not Expired; change the Valid until date if needed.
A customer accepted by phone	Open the quote and change Status to Accepted, then Convert to installation.
A product doesn't appear in the shop	Check Show in online shop and Active are on, and that the shop is ON in Shop & orders.
A pop-up doesn't show	Check it is On, the dates include today, the page is ticked, and that you haven't already seen it (try a private window).
Vola gives a wrong answer	Add the correct information in Website content → AI assistant → Extra knowledge, or fix the FAQ or package.
I forgot my own password	Ask your developer for a one-time reset link. It opens a page where you choose a new password, and it stops working once you have.
I want to show the shop to one customer while it is switched off	Shop & orders → Private shop link → Share on WhatsApp (or copy the link).
Two jobs need the same person at the same time	The schedule window marks them Clash and warns you before saving. Pick someone else or change the time.
A customer sent a review	Website content → Testimonials. Check it, then switch on Published — or delete it.
I don't get emails	The email service must be connected and the from-address set up. Check Connected services.
A page shows "This page didn't load"	Check your internet, then click Try again.

Need help?

For anything technical — domain, email service, payment keys, voice service, backups — contact your developer. For day-to-day use, this guide and the Staff guide cover everything.
